

University
of Glasgow

Title here

AUTM

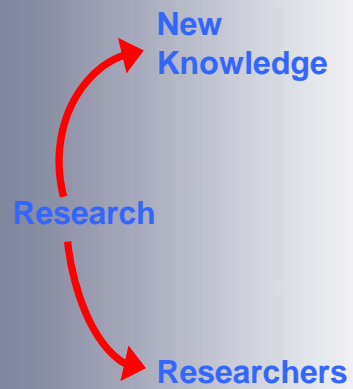

10 October 2007

- How big is the KT agenda?
- What is expected?
- Who has responsibility?

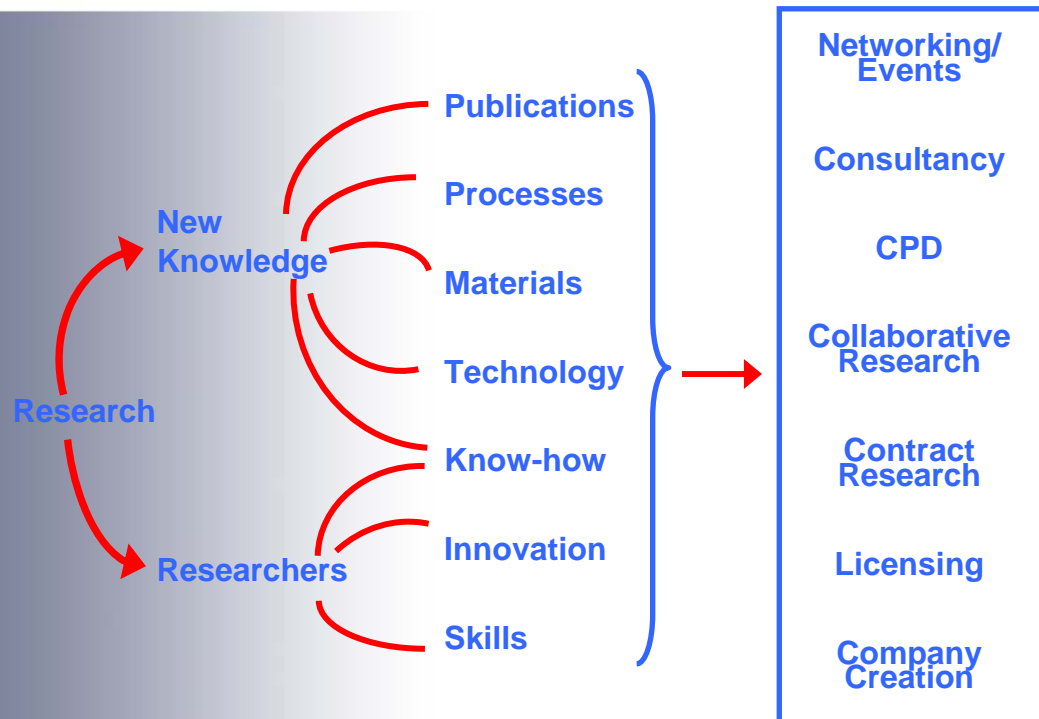

...major topic in the UK since 1995

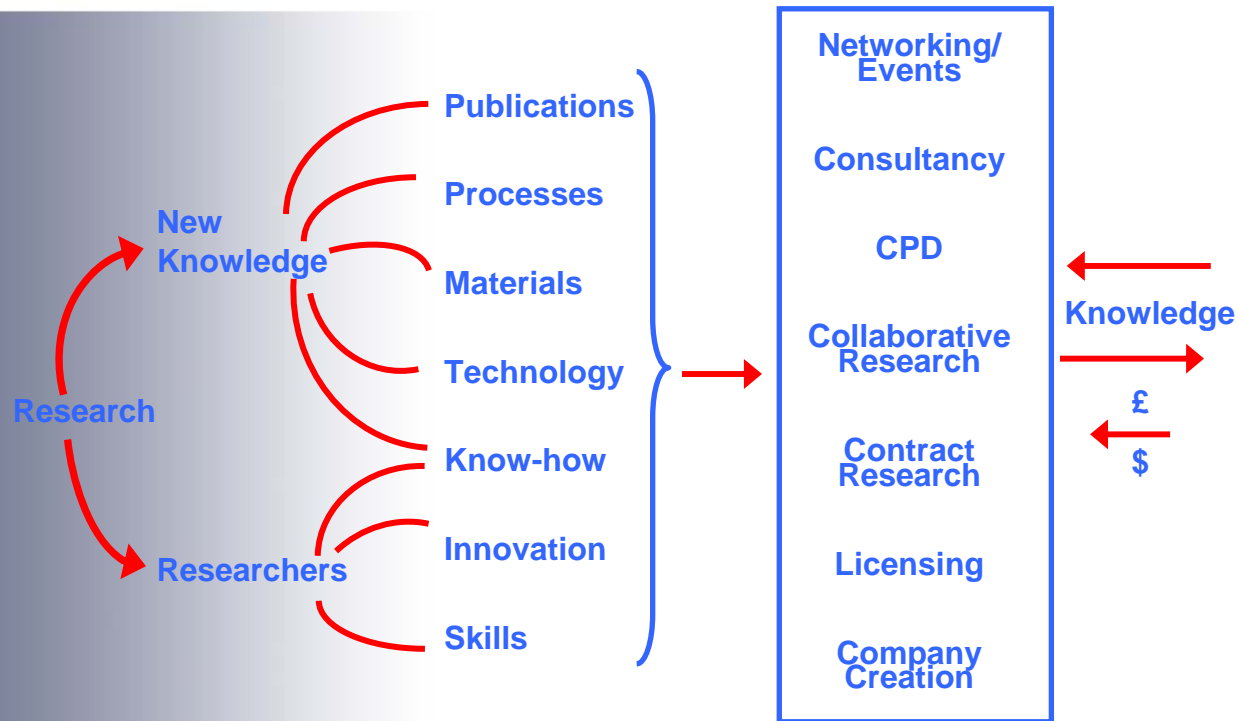

- There has been much focus on the University role in KT
- It is an important part of the ecosystem, but ONLY a part.
 - University Research has been cited as key...

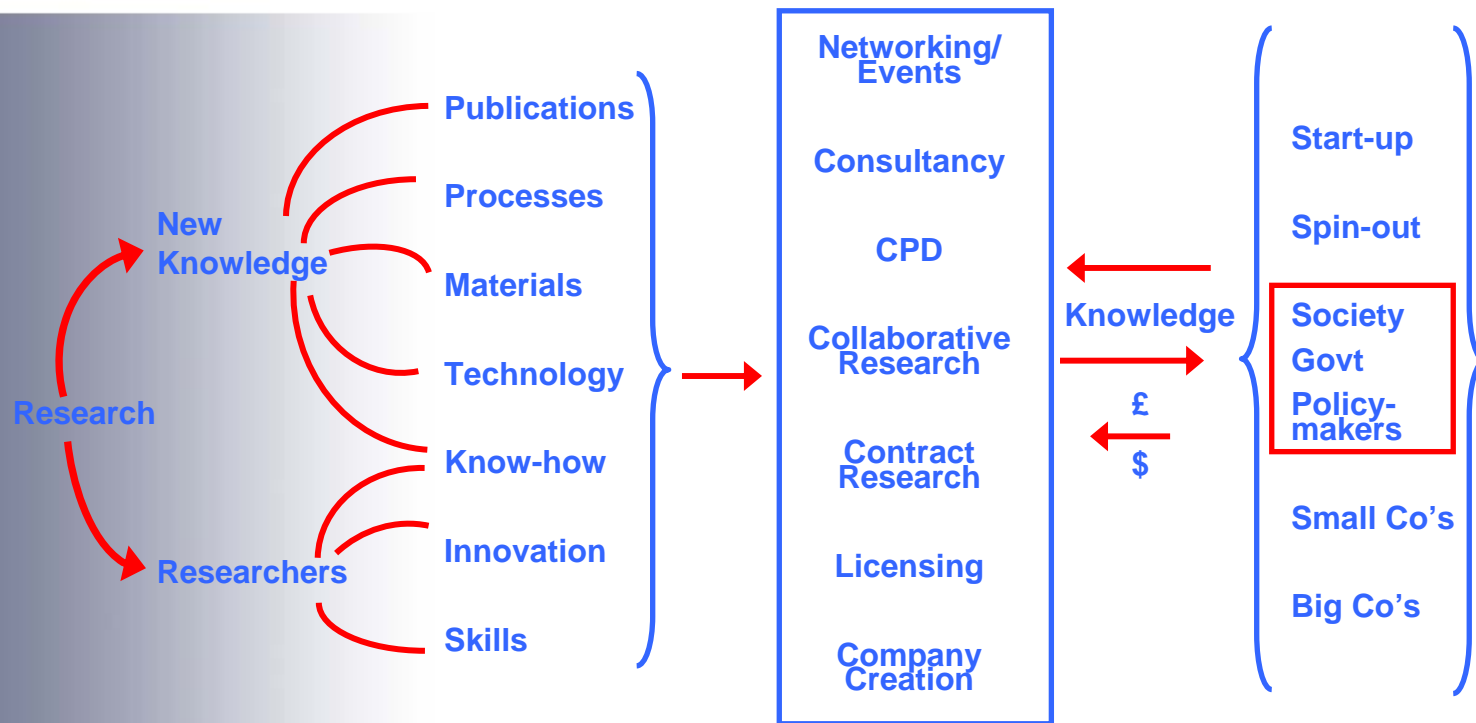

....look first at what University research contributes

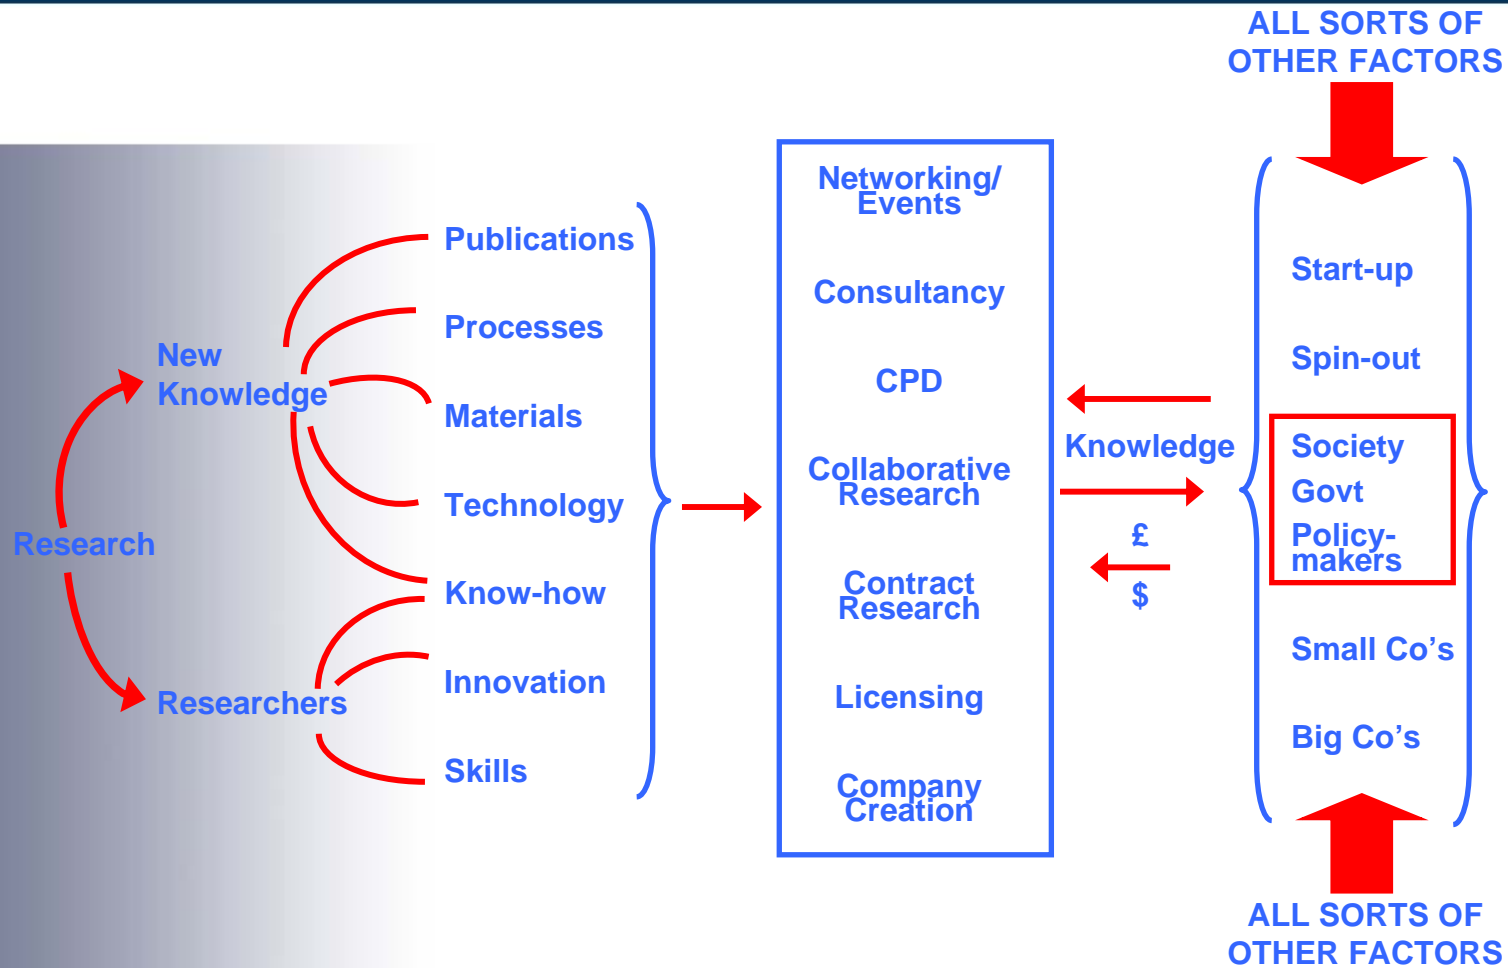

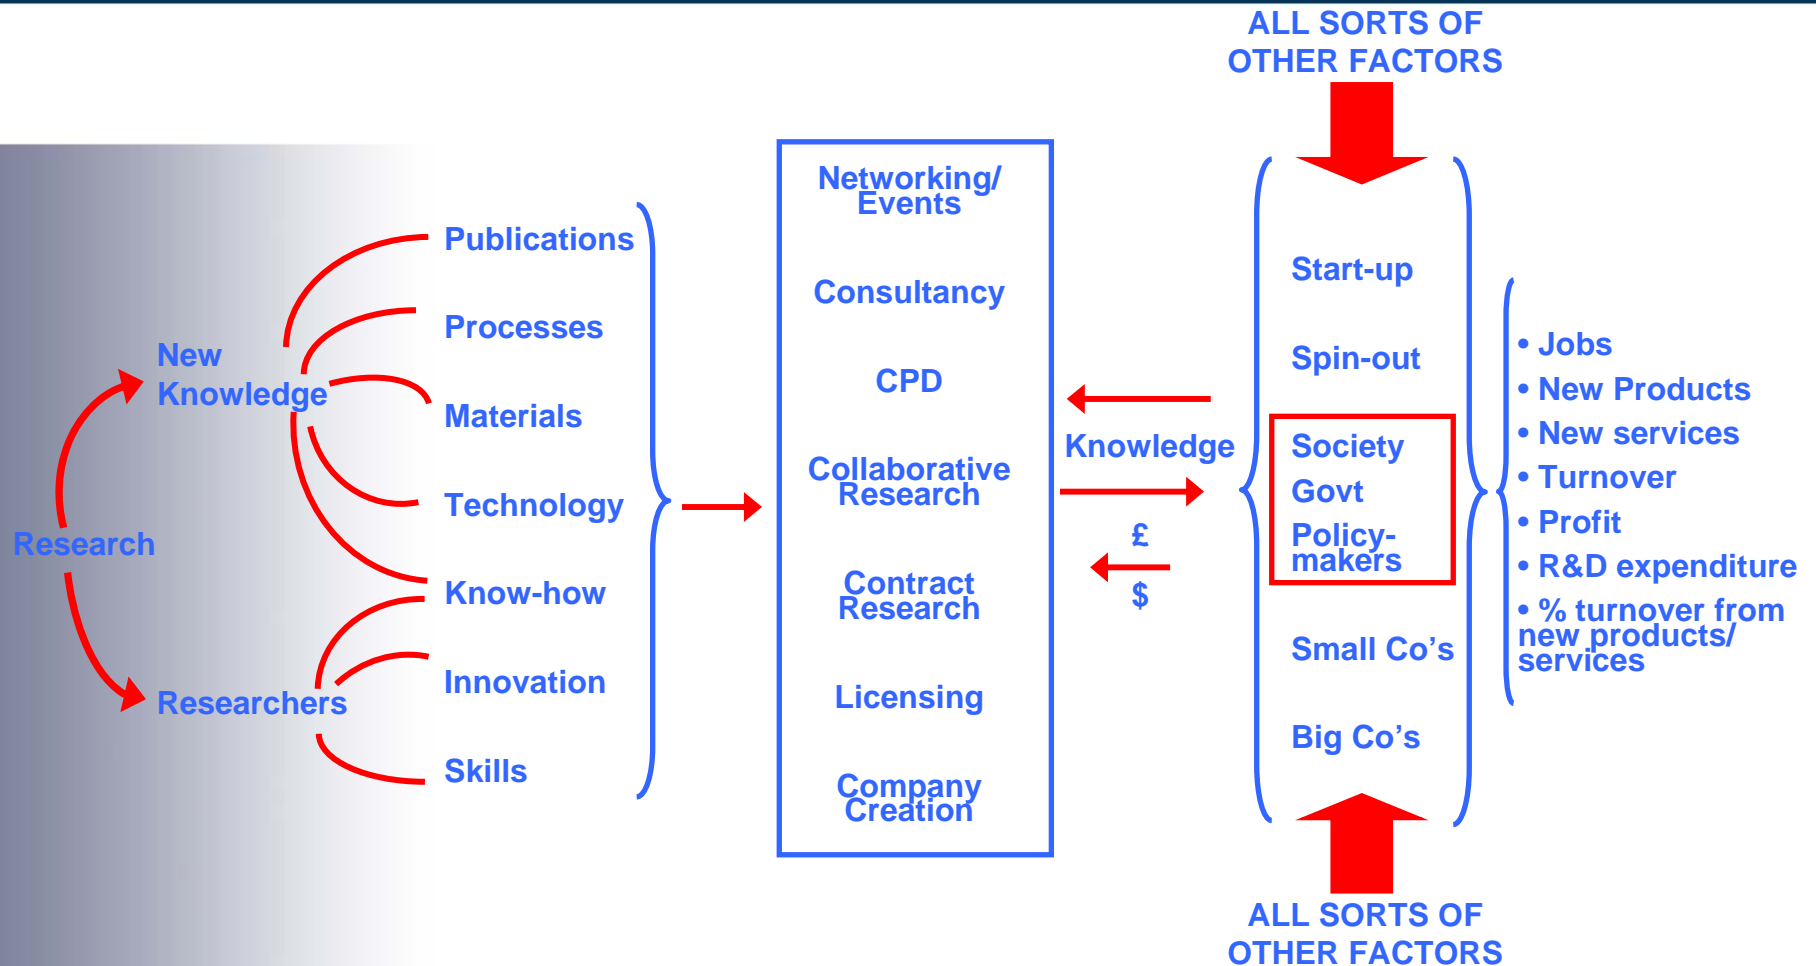

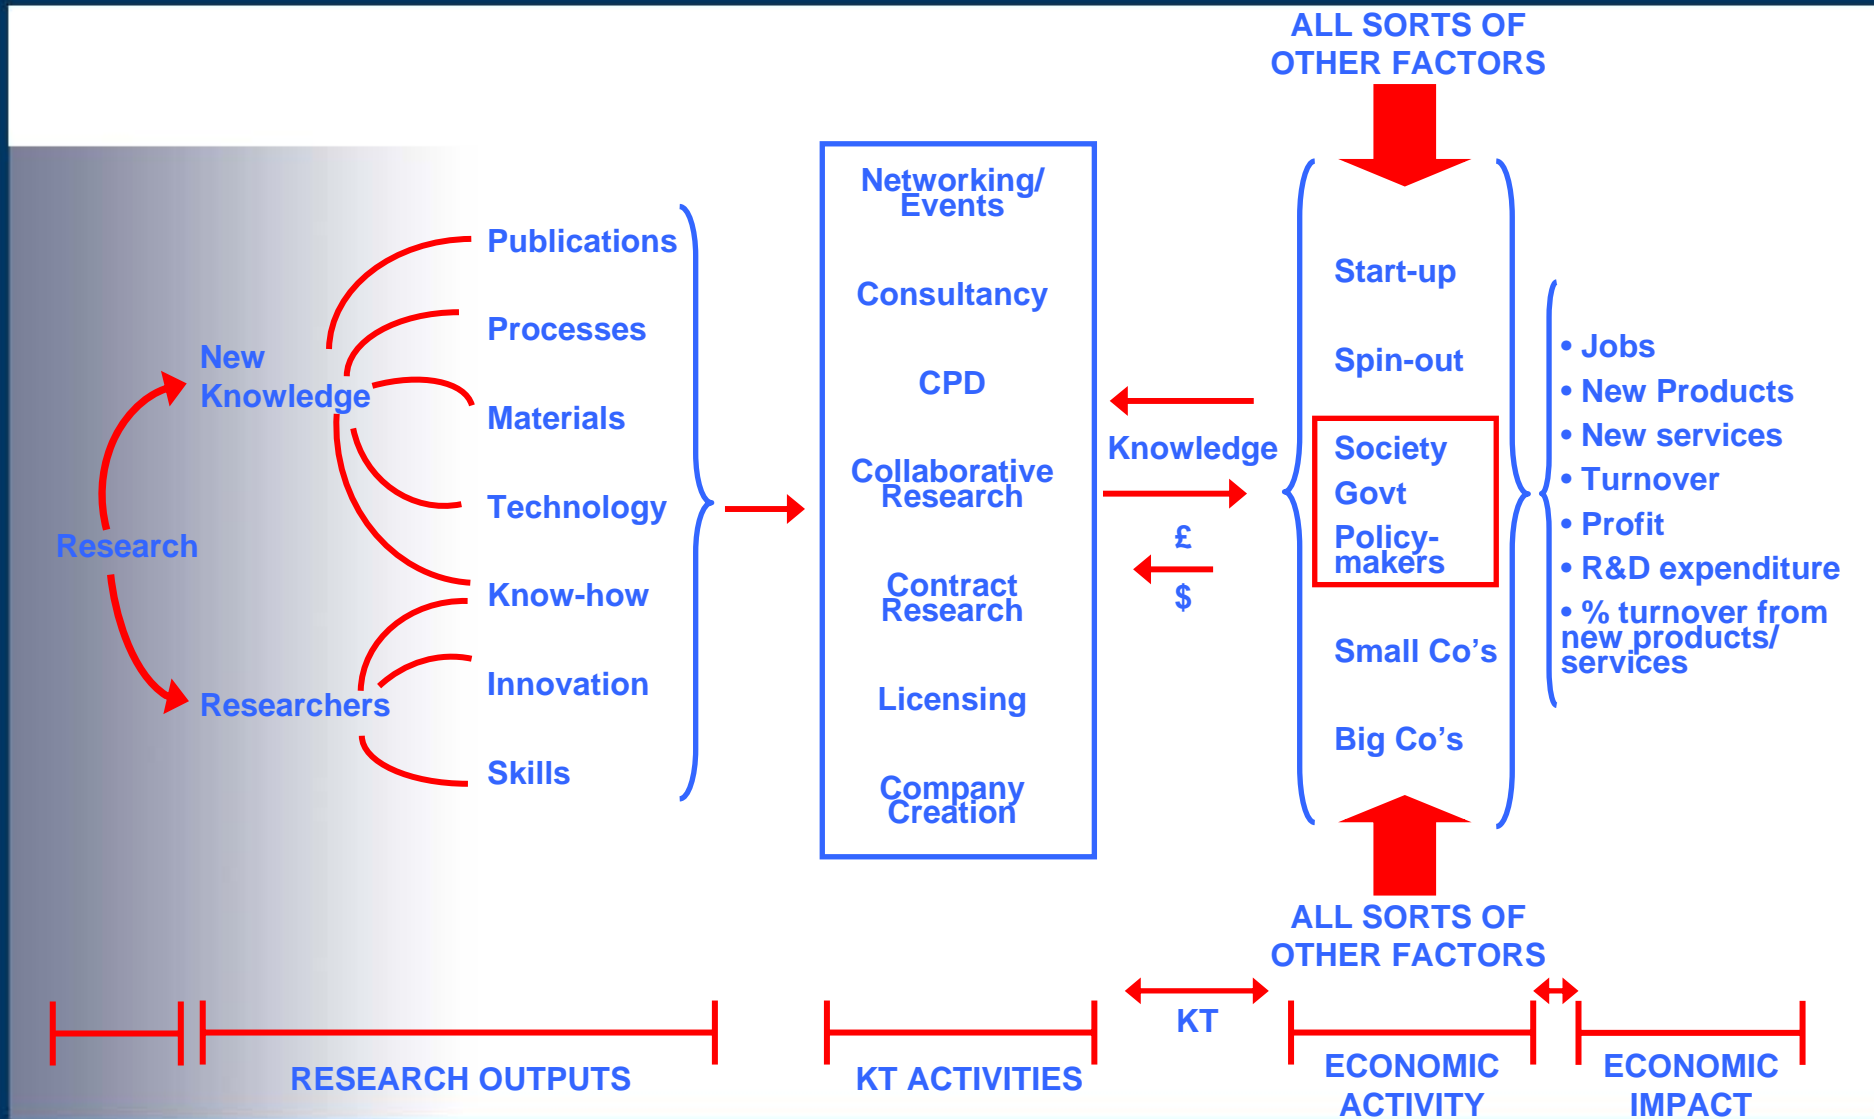

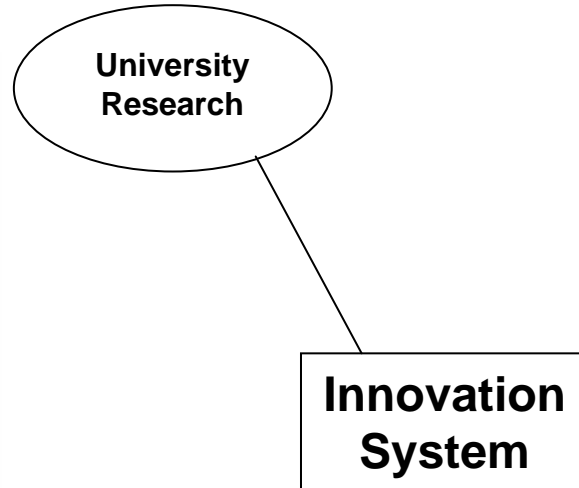

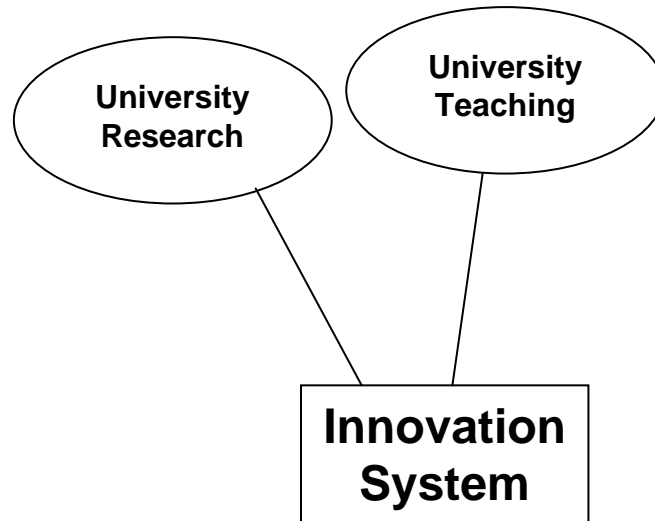

- University role is complex but clear
 - Feeds from other parts
 - Feeds into other parts
- Tech Transfer is a component of the University KT system
- The University is a component of the overall KT system

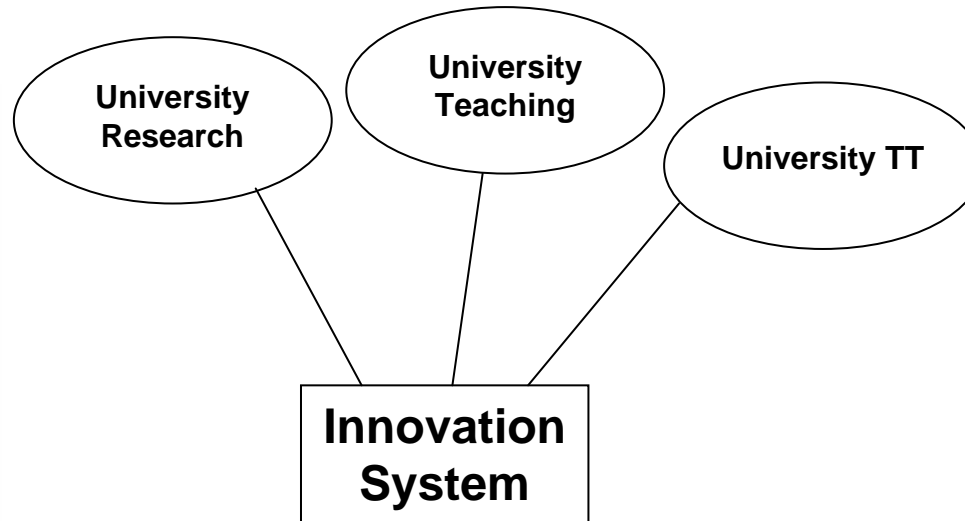

The University is only part of the system

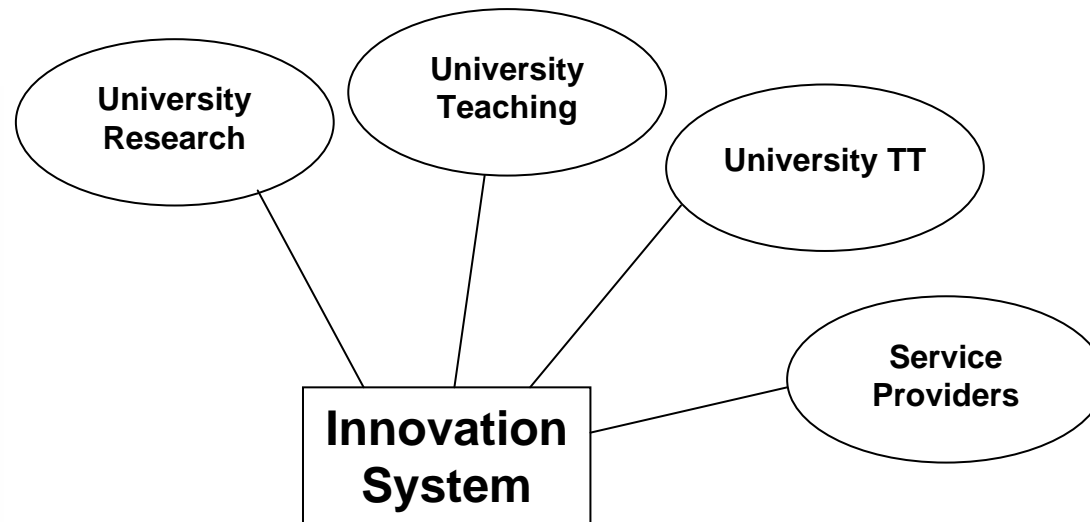

The University is only part of the system

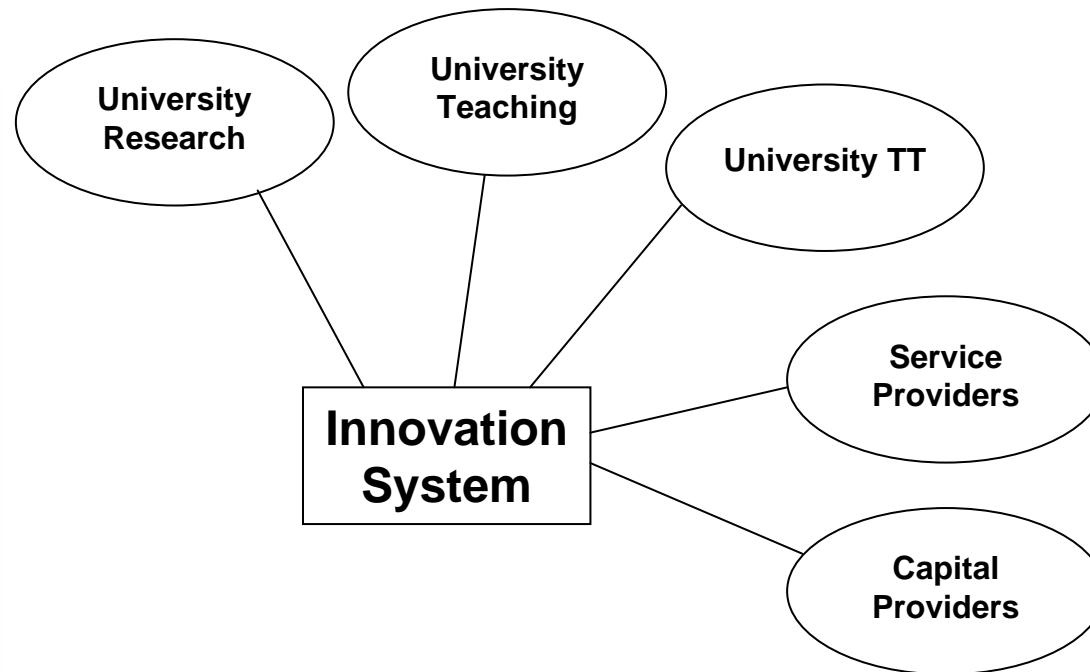

The University is only part of the system

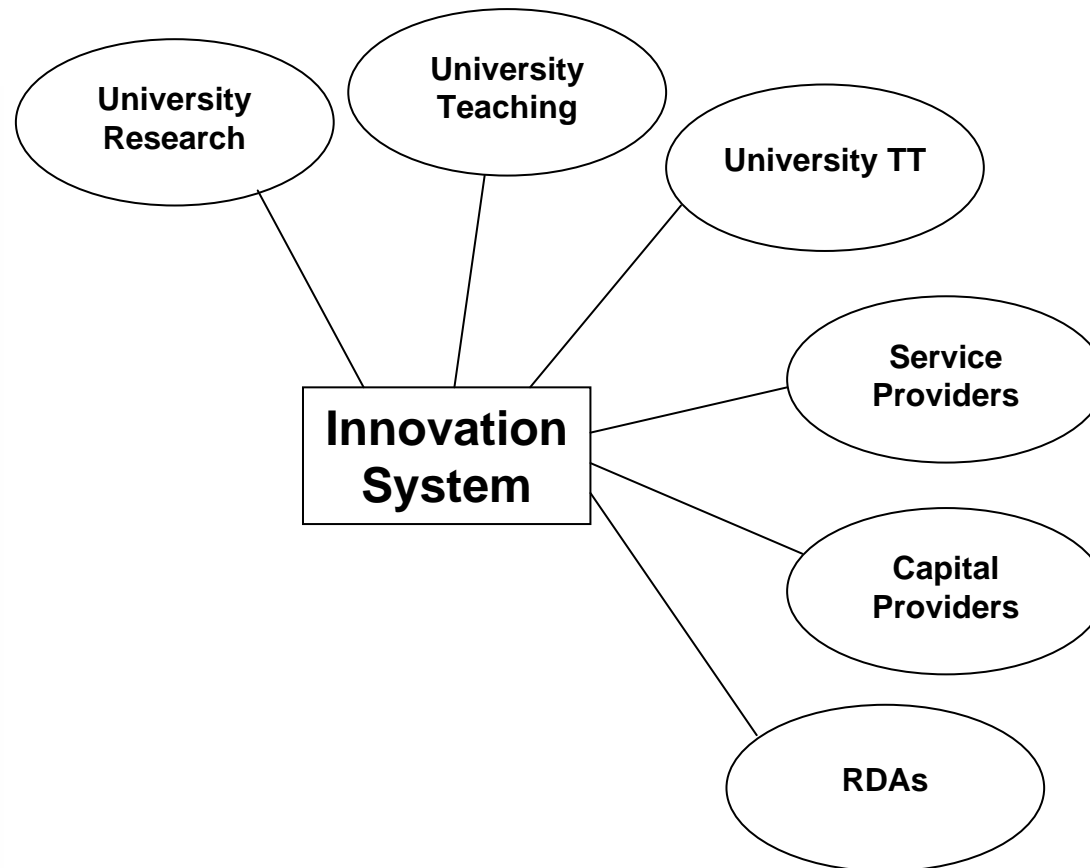

The University is only part of the system

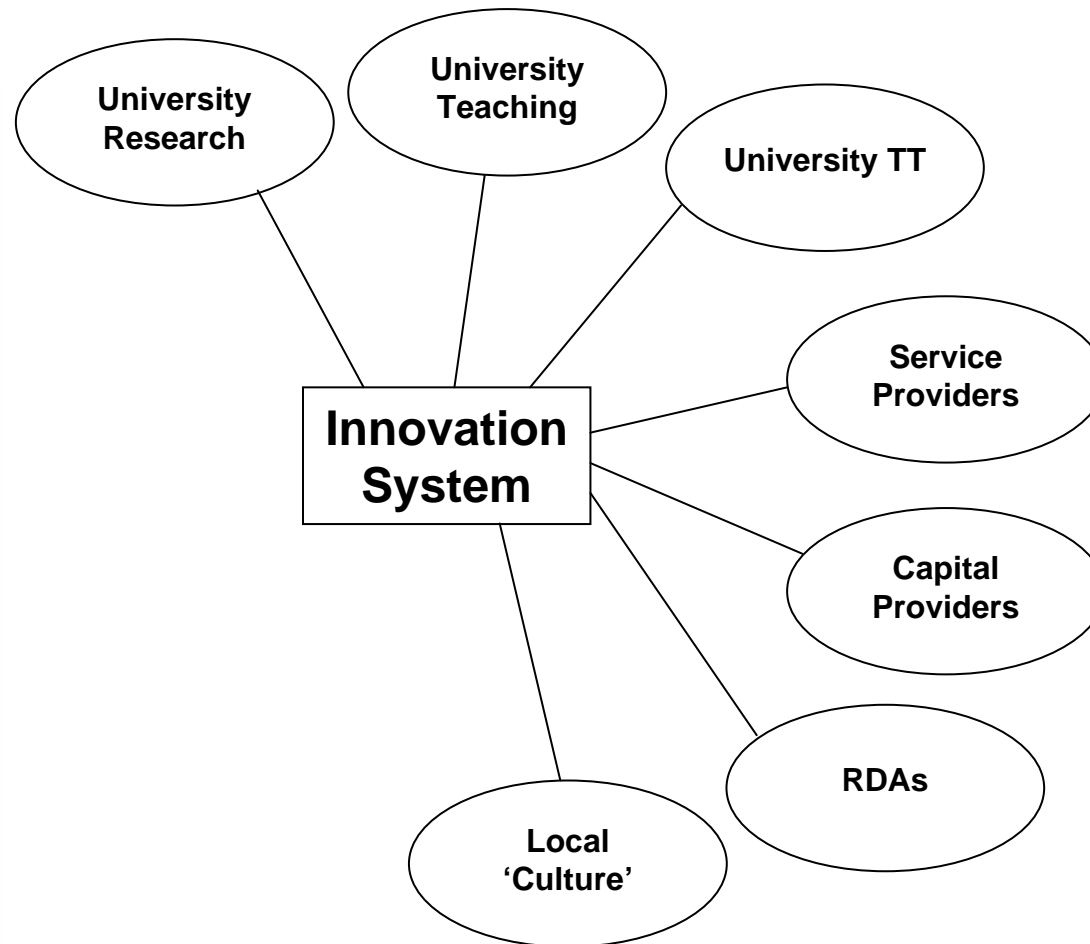

The University is only part of the system

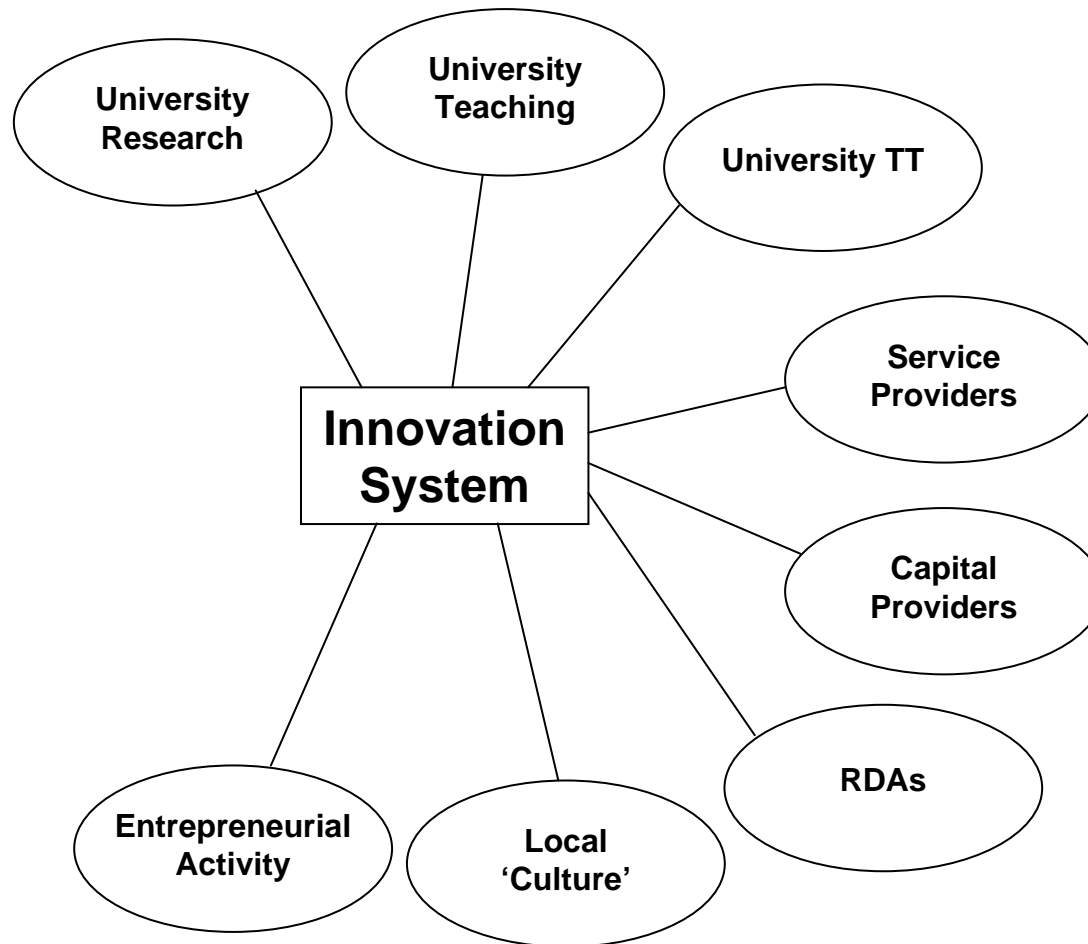

The University is only part of the system

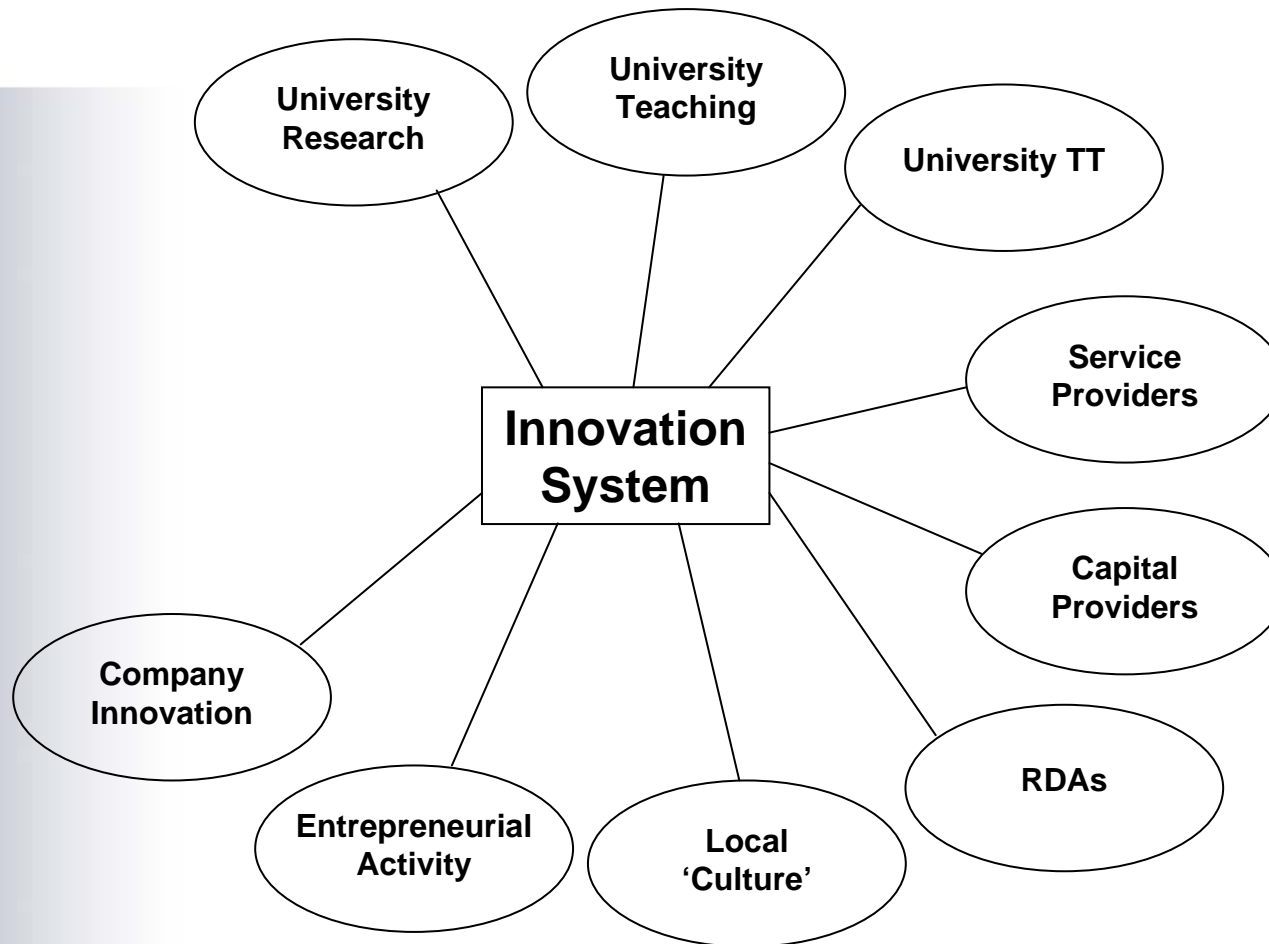

The University is only part of the system

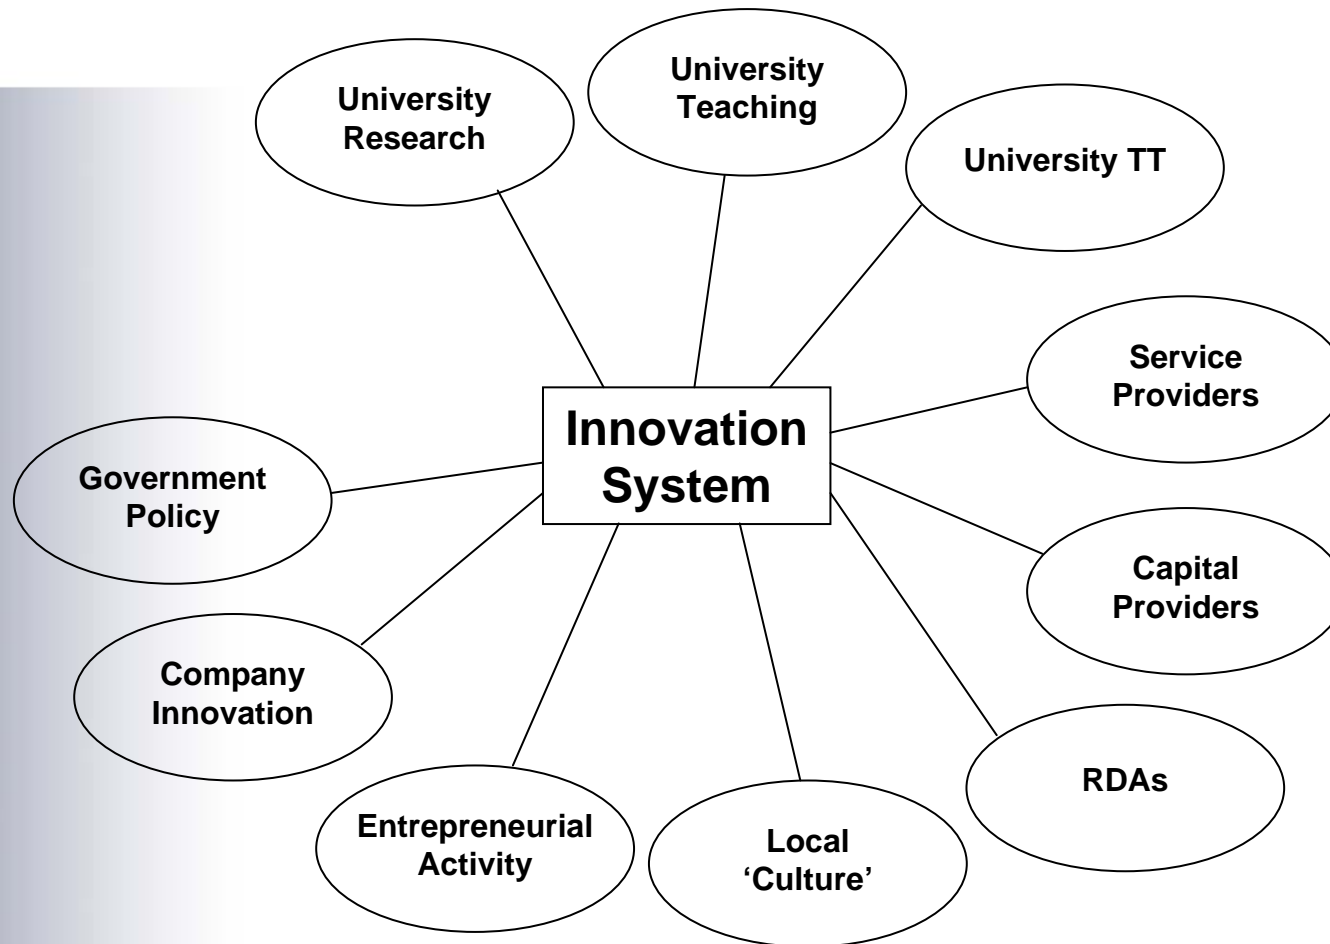

The University is only part of the system

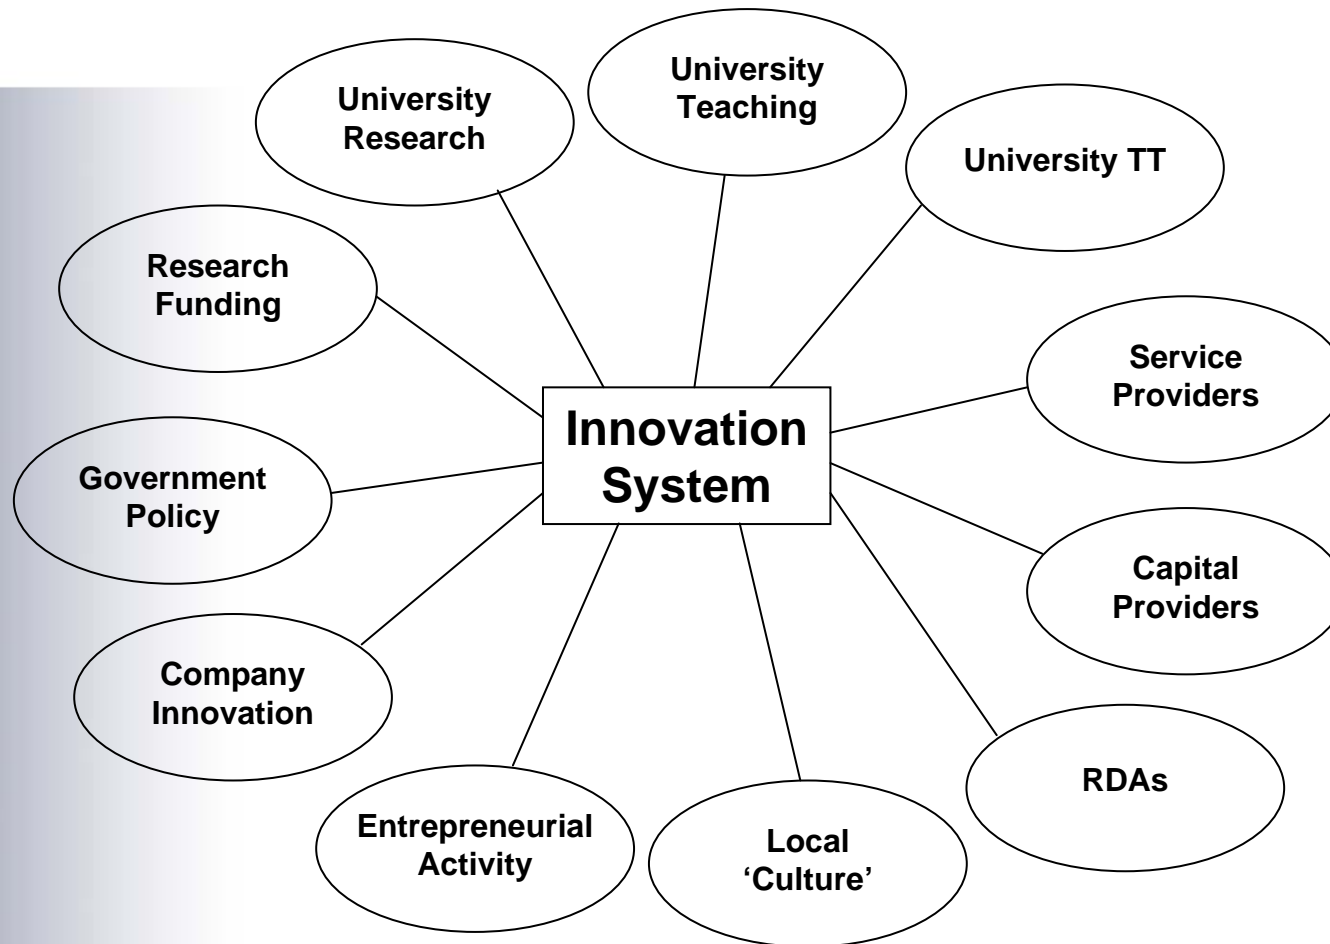

The University is only part of the system

The University is only part of the system

The University is only part of a system

The Challenges are...

- To understand what success is (for the system)
- To set appropriate 'objectives'
- To understand roles and interplay

...we seek your thoughts

Thank you

Dr Kevin Cullen
