

On-Street PCN code 26

This contravention deals with vehicles that are parked more than 50cm from the kerb and not within a designated parking place.

Evidence required for the issue of a PCN

- 1) Evidence must show the vehicle stationary parked more than 50cm from the kerb and not within a designated parking place.

Method of Gathering Evidence:

In all cases, whether for signs or markings, it will be a pre-requisite of evidence, that a record has been made that day, or at the time of contravention, that the sign or markings were present, correctly orientated and in good condition.

The EO should capture incidents that clearly show the vehicle stationary in order to demonstrate that the vehicle has stopped. They should do this by capturing a clear context image of the vehicle as soon as is practical. The second context image should demonstrate the vehicle parked more than 50cm from the kerb and not within a designated parking place.

The time difference between the images should be enough to demonstrate that the vehicle is fixed and immobile. A **continuous** observation period of **30 seconds** should be enforced to determine whether the vehicle has parked or merely stopped.

In the close up image, the EO should capture the Vehicle Registration Mark and if possible the Make and Model of the vehicle.

A contemporaneous record of the Camera No, Location, Time, Date, Vehicle Description, Offence code and PEZ id must be kept by the EO and made available on request to authorised personnel.
