Dear Colleagues

During our conversation last week there was discussion of the things that we might do to capitalise on the CRU story but also to continue re-taking control of the agenda. Neil mentioned a couple of placed articles.

I thought it would be useful to try and get some shape to this in the context of what we know is happening (albeit that timetables are a bit complicated and many things to be confirmed). In addition to directly UEA related events we need to consider the IPCC timetable and other things that are going on - each is an opportunity to comment if we are prepared. We also need to consider events we can 'manufacture' - public debates, engagement with bloggers, lecture etc.

On that basis I have drawn up the attached document which is a simple grid (apologies if it seems a bit 'new Labour' news management but starting from a shared understanding of what and when as well as the context is usually worth having) of things we know are happening - even if timing is uncertain - and things that we might set up if we want to. I have included holiday dates as these can sometimes get in the way - particularly of public events.

Offered as a starter for ten but if we plan to do anything of substance we need to plan it - particularly if we want good speakers or to involve externals.

Regards

Alan

Norwich: fourth highest cited UK city for science, thanks to the University and our Norwich Research Park partners.

Week Commencing	Fixed/Possible	For Consideration
22 Feb	Announcement of Science Reassessment Chair – tbc	
1 March	Select Committee	
8 March	Announcement of Science Reassessment Panel and timing – tbc	
15 March		
22 March	Second meeting of lead authors for IPCC Special Report (Hanol)	Placed feature on climate debate in a Sunday magazine? (Note that Observer did a major piece on Met Office this weekend 21/2/10)
29 March		EASTER
5 April		EASTER
12 April		Possibly launch concept of 'live' web chat (see w/c 10 May)
19 April	Science Reassessment report (?)	
26 April		
3 May	Russell Independent Review – possible interim report (?)	MAY BANK HOLIDAY
10 May		Possibly hold a 'live' web chat with CRU and key bloggers on science issues (possible media partner or hosted by UEA with one 'sensible' blogger)
17 May		
24 May	Selection of authors and Review Editors for the AR5 by the IPCC Bureaux completed. (date tbc)	Could we coincide with a UEA event in London to discuss the best shape for debating climate change issues – also giving pre-publicity for June event below?
31 May	Russell Independent Review report (?)	MAY BANK HOLIDAY
7 June	4 th Annual Climate Change Summit in London (held by the Ethical Corporation)	
14 June		
21 June		London Lecture (alumni event) – was planned to be on climate change but can be altered.
28 June		
5 July	IPCC Cross-Working Group Meeting on Consistent Evaluation of Uncertainties and Risks.	Do we have any lead authors/reviewers who could/should comment?
12 July		
19 July		
26 July

Dear Neil

Just for completeness I am attaching the notes sent by Lisa and me last week about the timings we currently have. Don't believe either of us got bounce backs so you may want to review your email settings to see if they ended up in your trash/spam box. If you can let me know what eta you have on Thursday we can advise colleagues accordingly to make the best of the time.

Also attached is another that I sent on Wednesday with some further background about the Select Committee (Confidential on attachment).

Subject: Re: Select Committee questions

I didn't know these times had finally been fixed upon, actually.

I will cc this to my colleague Sam Bowen, who is organising the media-training expert, to ensure he's up to speed too.

What I originally discussed with Trevor was using Tuesday to concentrate on Edward and Phil's responses to actual questions – and we need to hone down to perhaps 10-20 that are the most awkward.

Thurs we discussed as the body language/camerawork session to look at how they both present themselves. As three of us are coming from London (I for instance have an appt. Wednesday night I can't break so can't come up over night) then 9am might be a somewhat unrealistic start-time.

On separate issues, I think your grid is a very useful thought indeed. We discussed the need to lay out a timetable, but I think its a good idea for the longterm to develop it like this.

Again, on reflection I think you are also right about giving Phil and Edward the target areas, even the questions, in advance - It will concentrate the mind on the scale of the potential issues massively.

Best,

Neil

On 21/02/2010 17:14, "Preece Alan Mr (MAC)" <A.Preece@uea.ac.uk> wrote:

Dear Neil

Any further thoughts on this. As you know we currently have Edward on Tuesday from 3-5pm and then both Phil and Edward from 9-2 on Thursday (with colleagues being lined up to act as the Committee).

On reflection it would seem the best use of time to let Phil and Edward have the questions in advance so that they can get their heads around the topics - otherwise the sessions could waste time on fundamentals rather than technique.

Dear Neil

It would be useful to get ducks in a row for next week. I think you have the availability of Edward for rehearsal etc. I have asked [REDACTED] to reserve the Thursday time in the diaries of several colleagues in anticipation of a 'mock' Select Committee taking place at some point. I wasn't in the meeting you had with Edward and Trevor and appreciate that another process might have been discussed. Either way we could do with getting things fixed as anyone involved could probably do with some sort of briefing on what is expected of them. Or we can stand them down if you prefer.

May be easier to do this over the phone?

Subject: Select Committee questions

Folks,

Wonder how we are getting on in assembling the questions that Phil and Edward might receive at the Select Committee.

I said they need to be a mixture of the politically awkward and the scientifically contentious with a liberal dash of leaked emails.

Hope I'm not being presumptive, but thought both Annie and Simon had been battered with all this stuff for months yet have retained impressively encyclopaedic memories.

It would be great if they could assemble a batch as discussed, and the sooner Sam and I could see them the better to get us thinking.

I don't have to say of course that Edward and Phil shouldn't see them before Tuesday.

WDYT?

Best,

Neil

REHEARSAL QUESTIONS FOR COMMONS INQUIRY

Area 1: Are the terms of reference and scope of the Independent Review announced on 3 December 2009 by UEA adequate?

What was your thinking in setting up an Independent Review – Penn State conducted their enquiry into Michael Mann internally?

Isn't it an inadequacy of the terms of reference that you have felt obliged to set up a second panel to re-assess the science?

Do you still have confidence in the Independent Review?

Are you still convinced by its independence?

Why has it been necessary for a separate review to be set up to reassess the science?

Why did the university not insist that the Independent Review assessed the science?

Why has the Independent Review been so slow to get started?

Have you had any input into the selection of panel members?

Why has one panel member resigned?

Why do you think another panel member (Boulton) is under pressure to resign?

Was it sensible to appoint a panel member who has worked at UEA for 18 years and whose CV claims he contributed to the IPCC?

How do you respond to the many commentators who feel the Review is fatally tarnished by the resignation of one panel member and the comments of Boulton?

Did you consult – or consider consulting - with the 'sceptic' community when setting up the Independent Review to ensure buy-in from all sides?

Area 2: What are the implications of the disclosures for the integrity of scientific research?

Would you agree that you have let science down?

Would you agree your mishandling of emails/security has let science down?

Would you agree your handling of data has let science down?

Would you agree your FOIA failures have given rise to scandal that has damaged confidence in science?

Don't you think you reacted too slowly to the allegations arising from the emails?

Should you not have organised instant rebuttal?

Would you agree that the University made errors/mistakes?

What would you do differently in retrospect?

What lessons have been learned at UEA?

What action have you taken to ensure there is no second breach of IT security at UEA?

Data:

Have you or your colleagues in CRU ever lost important data?

Have you ever destroyed important data?

Have you ever manipulated any data?

Has CRU kept all raw data relating to its key scientific papers? If not, why not?
Has CRU kept all of its own datasets relating to its publications? If not, why not?
How transparent were you in terms of your data?
You have been criticised for being extremely disorganised – to the extent that your science is compromised. Is this the case?
Why are you so unwilling to share your data with others? Isn't this part of good science?

FOI:

What were your reasons for being so vehement in not wishing to share data with 'sceptics'?
Why did you want to "hide behind" agreements with NMSs – as you state in your emails?
Have the NMSs now all agreed to the release of their data?
Why has the university refused to respond to FOI requests?
The Information Commissioner has said you contravened the FOIA. Do you agree?
Why did you urge colleagues to delete certain emails?
Did you actually delete emails, as you said you would?
Did your colleagues delete emails, as you urged them to?
Did your university encourage you to withhold data and frustrate the efforts of FOI requesters?
Were, as is implied in the emails, all those directly involved in handling FOIA requests part of an agreement to frustrate requests for data?
Do you accept that the attitude expressed in the emails is inconsistent with the spirit of the Act as well as against the need for transparency in science?
You have admitted in recent media interviews that you did not conduct FOI requests properly. In what way were the requests wrongly handled?

Peer-review/IPCC:

It looks plain from your emails that you attempted to manipulate the peer-review process by obstructing articles that you did not agree with. Is that correct?
Do you agree there has been harmful 'tribalism' and a 'bunker mentality' in climate science?
You say that you stand by your science which has been peer-reviewed, but you have subverted peer review, so why should we believe that the science is correct?
The community of scientists working in elements of climate change – particularly those working with temperature and tree rings – is very small. How can you ensure that peer review is not a cosy club?
Should peer-review be overhauled? How?
Should the IPCC be overhauled? How?
Should bloggers/sceptics now be brought into the mainstream scientific debate more? If so, how?

Science:

What do you say to those who claim you cherry-picked data to fit your theories?

Is it ever right to cherry-pick data?

How can you justify the use by CRU of samples from just a handful of trees to support major theories of global warming?

How do you respond to claims that your 1990 Nature paper was flawed, misleading and even fraudulent - because it did not take proper account of the urban heat island effect on Chinese weather stations?

Why did the paper state there were "few if any changes" in stations, when many were moved, including one which moved five times over a distance of 41 kilometres?

Why was it necessary to 'hide the decline' (or 'divergence' between proxy data and temperature data) in the famous hockey-stick graph?

Why not just show the divergence clearly?

If proxy tree-ring data cannot be trusted for the 1960s, why trust it for earlier periods?

Have you changed your views on the Medieval Warm Period?

Have you changed any of your views on AGW?

Has Prof Jones personal integrity been damaged by the emails released?

Will you be releasing your code as well as data?

How do you respond to severe criticisms of your computer code?

How can you separate the quality of your code and of your data security from 'the science'; surely it is at the heart of the integrity of your research.

Personal attacks:

Why do you think somebody 'stole' your emails and released them on the internet?

How do you feel about climate sceptics and bloggers like Steve McIntyre?

Do you feel your treatment of people who do not share your views has been acceptable?

Can it ever be acceptable -- even as a joke -- to express pleasure at the death of someone who does not agree with you?

Would you agree that many of the emails suggest a small and privileged group of insiders acting in concert to deride and exclude people with genuine interest in climate change?

Public trust/PR disaster:

A recent poll showed the public are beginning to lose faith in the idea of AGW.

How much responsibility do you accept for the weakening of public trust in science -- and in the IPCC?

What will you -- and others -- do to help reinstate public trust?

With the benefit of hindsight, what -- if anything -- would you have done differently?

Why did UEA/CRU put their 'head in the sand' when the story first broke?

Have you at any time felt gagged by the university?

How do you feel the university has handled this whole issue?

Do you understand why there has been so much interest, controversy and anger? Why didn't the University get on the front foot more quickly to protect its integrity and that of the science – the head of the Science Media Centre has said that they would have got scientists out and talking much more quickly?
We have seen a recent spate of interviews with Prof Jones – why now?
Given the global impact of this and its impact on UK science what have you done to manage the story globally?
Has this matter fatally undermined the reputation of CRU and the University?
Would you agree this affair has damaged the University's reputation?
How is public confidence in climate science to be restored/strengthened?
In your opinion, why has there been such a furore since the email disclosures?

Governance:

Have you paid for professional advice on how best to give evidence before the Select Cttee?
What did the VC know about this issue and when?
Given what the ICO calls 'prima facie' evidence of illegal acts and the evident seriousness of several allegations why were Prof Jones and others not suspended pending enquiry?
Was the University's Council consulted on the response to this issue?
What other advice has been taken in handling this matter?
How do you know your academics comply with the codes of good conduct governing research?
How will you deal with it if it is established that (a) individuals and/or (b) the University contravened the FOIA?

Security:

Collaboration is based on trust – how have colleagues and institutions responded to the security breach that has compromised personal details and comments as well as data?
Would stakeholders, including funding councils, be right to think twice before trusting UEA with information in the future?
What assurances can you give that this breach of security will never be repeated?
Have any of your current collaborators indicated their concerns about the security issues involved?
Has the University lost any research funding as a result of this incident?
What has the University done to improve data security since this incident?

Future:

What does the future hold for you and for CRU?
How do you think history will judge you?
Can you continue as Director of CRU?

Area 3: *How independent are the other two international datasets?*

Can you explain the key differences and the key similarities between the three data-sets?

Have the GISS and NCDC data sets been manipulated in any way?

How can GISS, NCDC and CRUTEM be independent when they overlap to such an extent?

How do you respond to claims that all three data sets have been assembled by a small cabal of like-minded 'warmists'?

Should CRUTEM now be abandoned?

Should CRUTEM be removed from CRU and transferred to the Met Office

[REDACTED]

From: Neil Wallis [neil@neilwallis.co.uk]
Sent: 22 February 2010 18:59
To: Acton Edward Prof (VCO)
Subject: Select Committee Preparation Plan

Edward,
See below,
Best,
Neil

SELECT COMMITTEE PREP PLAN

METHODS: Group including NW, SB, TD, but also the UEA press team - I think it needs to include those who have been subjected most often to hostile, misguided, wrong, ill-informed, bad-tempered, partisan questions ie Alan, Annie and Simon.

We've seen the times given us, which are less than we hoped but we'll do our best to work within them.

essentially we will pose the most difficult, complicated questions we can be asked, and help Edward and Phil to find the appropriate answers.

He has also helpfully given us the Select Committee guidelines.

MEDIA TRAINING: CE Communications Impact¹ trainer, [REDACTED] will require 2 hours individually with both Edward and Phil. He will film them at the beginning of the session as they talk for 2-3 minutes on the matters relating to the Select Committee. Following that, he will look at how to work/communicate under pressure, keeping up energy levels, performance critique, technique training, body language and breathing exercises. He will then film again at the end. Suggested that the final hour on Thursday is seen as a mock Select Committee with Neil Wallis, Sam Bowen, [REDACTED] and all at UEA working together to ensure a tight delivery of answers.

BASIC OPERATING POSITION: We need to divine exactly what does Edward answer, what does Phil answer? We need to divide this up and stick to it as rigidly as possible ie if Phil gets a generalized question about FoI procedure at UEA he defers to Edward who then recounts the process then and now. Phil only takes it on if it specifically relates to something he did.

We need to decide our fundamental positions, which the press office has already made a very useful start on, and constantly hammer away at them. If we can get a good soundbite for each position, all the better.

We don't criticize or attack anyone, we treat different opinions or positions with respect and as misguided or wrongly informed.

BASIC SPLIT: My preliminary thoughts are below.

EDWARD is "Big Picture" re the UEA policy, actions and activities.
Therefore all:

* Muir Russell - taking too long; not independent; now compromised; Old Boys Network; terms of ref flawed; incompetence.

* Science Review - Why separate from above; members; time taken; rushed; why Royal Society not properly involved; how can it conclude if basic science is wrong/flawed etc

* Independence of above - this will recur again and again.

* Procedure - who oversees work of CRU; lax internal controls; monitoring processes; out-of-control; clean out stables;

* FoI Procedure - how could it break the law; lip-service; inadequate staffing; improvements.

*Security - How was the hacking possible; Who/Why; poor security; code problems; improvements; what about rest of UEA computer security

*Future Implications - Science credibility, UEA credibility

PHIL is the specifics of what he did, CRU did, or should have done.

*PJ/CRU crimesheet - all the allegations, both sinister and incompetence; truth v speculation, untruth or rumour (Pearce piece in Guardian could be of great use).

*Research results - were they ³fixed² to aid Global Warming lobby; was stuff concealed; the motives

*Data - was it lost ; was it distorted; How was it kept; data v documentation; what is data; Data collection/dissemination issues

*data sharing - Why wasn't/couldn't it be shared to anyone who wanted it; what was the emotional atmosphere; Reax of colleagues worldwide; Blogger problems;

*Fol - why they weren't done; mea culpa; atmosphere; time-consumption; examples

Peer Review - free speech or censorship;

*The science - setting the record straight; always facts, not opinion; Independence of two foreign data sets.

*Personal Impact.

Would just like to flag that there are two areas which I still think need clarification and which may crop up. One is about whether 'raw' or adjusted data have been retained and the other is CRU computer code. Newsnight had IT expert on rubbishing its quality - which is at the heart of the science. Best, Annie

Following on from our "Basics" email last night when we tried to suggest how the issues should be split between Edward and Phil, please see above a distillation of all the very useful questions compiled and sent by the press office late yesterday. Simon is of course right when he expresses concern at certain issues possibly falling between the cracks, but in our view each question spotlighted here essentially includes those relating too it.

Reality too is we have 180 mins today (2pm-5pm) during which if we only address the above 37 questions then it still gives less than 5 mins per question.

In the main we haven't dwelt on science detail (hopefully we get loads!) as Phil is well rehearsed now via the BBC Online, Nature and Science Intvus.

Clarity and simplicity of answers there will be the most important thing.

Hope this makes sense,

Best wishes

Neil

Further to my last comment, here is a comment on the blogs which helps demonstrate my point that we should not omit this area:

How independent are the other two International data sets?

That is the key part to this hearing on 1st March, if the data is independent then the issue is in house and Phil Jones becomes the fall guy, end of story. If not independent then the wider issue of AGW has to be discussed with all the financial implications. Lets hope Lord Lawson is aware of the implications of accepting Phil Jones head on a platter, it will jeopardise any attempt to remove the bedrock of AGW by criticising the temperature data.

Hi all

I've just spoken to [REDACTED] and wanted to briefly confirm the schedule for tomorrow..

We'll be with you by around 940.

10-12 - Edward's training, [REDACTED] Neil & Sam
12-2 - Phils training. Same people involved.

2-2,40pm - Mock Select Committee - timing as it will be on Monday. Suggesting that all in the meeting from yesterday are in
is if possible..

Hope thats clear. Any questions, please email..

Many thanks and see you tomorrow,

SAM

Subject: FW: Satellite datasets

Edward,

I asked Tim Osborn to write a short "rebuttal" to Lawson's incorrect assertion about satellite temperature data. He has done an excellent job. See below & attached.

I suggest we take down paper copies. Perhaps on the way down, Lisa could ring the clerk to see how we can correct an error of fact? He may say it is appropriate to email it, whereupon Lisa could ask someone in the VCO to do so. Lisa - please could you arrange for it to be ready for emailing if that turns out to be the way forward?

Subject: RE: Satellite datasets

Satellite and surface data records both show global warming. The two types of record are not directly comparable, but there is broad agreement between the two. Yet another type of record is based on measurements from balloons, these records also show broad agreement with the other two records. Given the fact that the different records represent different parts of the atmosphere, their agreement allows us to assign confidence to the overall conclusion of global warming.

This could accompany the posting of Tim's piece on web. Also point out satellite measurements stated in 1978.

Dear All

If we are going to correct it then we should probably ensure that the media know this. My slight difficulty is that I don't really understand Tim's paper well enough (obviously the conclusion is straightforward but we would be asked for a layman's reasoning).

Anne - can you also be ready to act if we decide to inform the media.

Global temperatures: surface and satellite measurements

(Prepared by Tim Osborn, CRU, ENV, UEA, 27 Feb 2010)

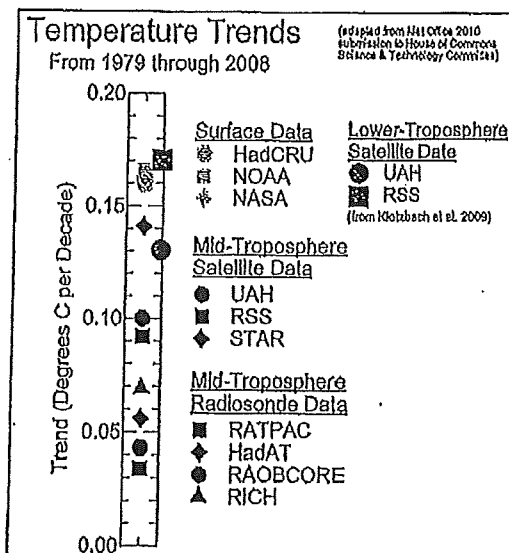

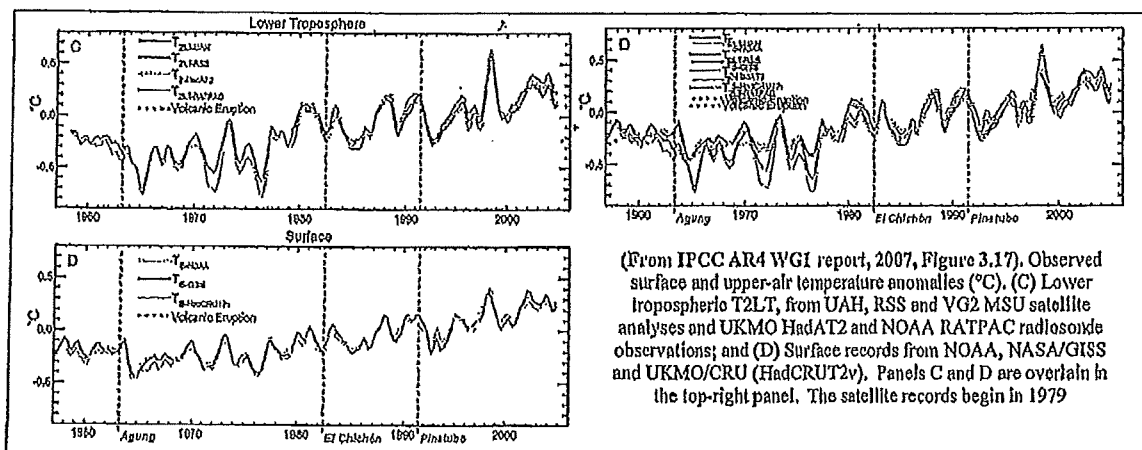

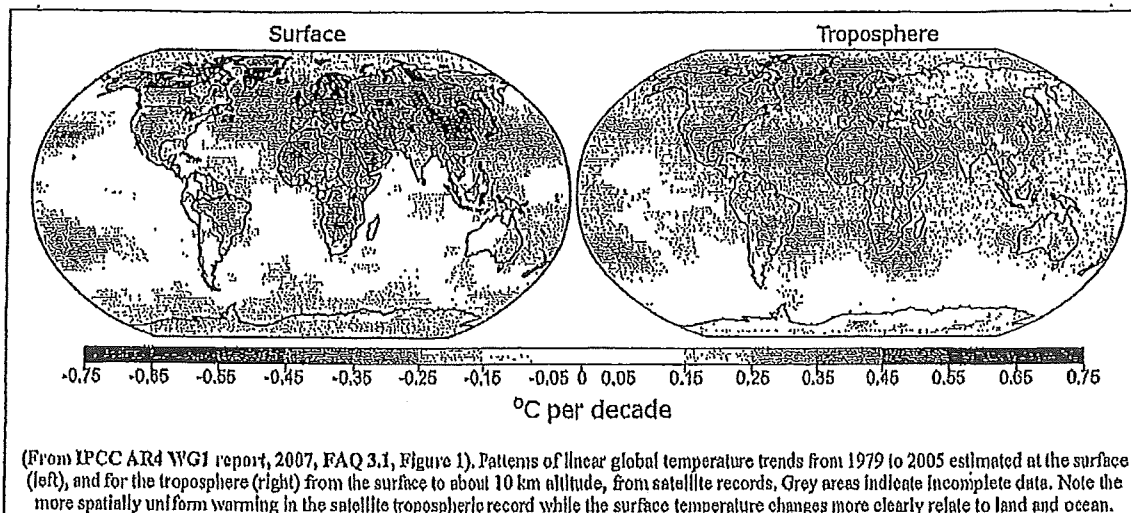

- Because they are measuring different parts of the system, differences between surface and satellite temperatures do not prove that one or both are in error.
- The "surface" temperature record is measured at weather stations on land and by ships/buoys in the ocean.
- The "satellite" temperature record is remotely sensed from satellites and provides estimates of atmospheric temperature away from the land surface (at various heights: lower-troposphere, mid-troposphere, lower-stratosphere).
- Both records – satellite and surface – show significant global-mean warming since 1979.
- Of course, the surface record provides information since the mid-1800s.
- There is greater difference between satellite-based temperature datasets than between surface temperature datasets.
- Both surface and satellite records have a number of uncertainties and limitations – a good strategy is to use all sources of information for monitoring climate change, including both the surface and satellite records.

Comparison between the surface and satellite data for 1979–2005 were shown in Chapter 3 (Trenberth *et al.*, 2007) of the IPCC's Fourth Assessment Report; two figures have been included here.

1. The maps of warming/cooling trends: both the surface (HadCRUT) and the satellite (RSS / Fu *et al.*) show warming in most regions of the world. The satellite data shows more widespread warming, but over land the warming is less than in the surface record.
2. The global-mean timeseries of surface (HadCRUT and the two US datasets) and lower-troposphere (two satellite and two radiosonde datasets) temperatures all show warming trends. A visual analysis indicates reasonable agreement when these are overlaid on each other.

The Met Office 2010 submission to the House of Commons Science and Technology Committee included a figure comparing the 1979–2008 global-mean temperature trends (i.e. 3 extra years compared with the earlier IPCC assessment). They showed temperature trends from surface temperatures, mid-troposphere satellite data, and mid-troposphere radiosonde data. I have adapted their figure to also include (in purple) temperature trends from lower-troposphere satellite data).

3. The two satellite-based lower-troposphere temperature trends span the warming trends estimated from the surface data, including the Joint Met Office Hadley Centre (MOHC) – Climatic Research Unit (CRU) dataset HadCRUT3.
4. The difference between the two satellite lower-troposphere temperature trends is greater than the difference between the RSS satellite trend and the MOHC–CRU HadCRUT3 trend.
5. It is misleading to state that the UAH and RSS satellite records "produce similar results to each other, which differ from those of the CRU" – full explanation of the basis for such a statement should be given (period of analysis, region of analysis, height of analysis, how uncertainties are estimated and taken into consideration, etc.).

(From Met Office 2010 submission to House of Commons Science and Technology Committee, adapted to include lower-troposphere satellite data from Klotzbach *et al.*, 2009). The graph shows trends in global-mean temperatures calculated over 1979–2008 from surface data (green), lower-troposphere satellite data (purple, from Klotzbach *et al.*, 2009), mid-troposphere satellite data (blue) and mid-troposphere radiosonde data (red).

Subject: Late June Symposium
Date: 13th March 2010
Time: 9:13:16 am

Dear Alan

Thank you for that energising meeting yesterday. Lisa has put the question to MR – can we be sure his Review will be done and dusted ahead of our proposed late June Symposium? He is going to consult his team – but only when they are due to meet NEXT Friday/Saturday...

I think it best you forge right ahead with provisional plans for the date identified as best in late June, booking space at UEA, devising invite, drawing up first-choice guest list and reserve, first choice debate host and reserve, marker in our diaries etc. And if we are ready to press the button long before next Friday we consider whether to go back to Muir or wait.

Best

Edward

Dear Colleagues

We have received a call from [REDACTED] who works for [REDACTED]. She says that they have heard a rumour from America that there will be a further publication of our emails in the near future. They are trying to find out more and, to be frank, it all sounds a bit of half-baked. You may recall that there were rumours early on that more emails existed but hadn't been published. Nonetheless, it is important to say that this rumour exists and to note that we should be prepared.

They have indicated that they will phone if they get more information but were cautious to say that they didn't want to set any hares running. We have provided them with the duty press office contact for the coming few days.

We have no more than that at this stage.

Subject: FW: I'll have a listen

Dear all

Have got Today to correct their headline. See below. Looks like an honest mistake.

Simon

From: Andrew Walker-Today [andy.walker@bbc.co.uk]
Sent: 01 April 2010 14:07
To: Dunford Simon Mr (MAC)
Subject: RE: I'll have a listen

Hi Simon,

I've listened to the interview in question and, as you said, the headline made little sense.

I apologise for this slip, which was an honest error on our part.

The page now reads as follows:

UEA scientist's reputation 'intact'

The Commons' Science and Technology Committee today publishes its report into the disclosure of climate data from the Climatic Research Unit at the University of East Anglia (UEA).

The committee found no evidence that Professor Phil Jones, whose e-mails were hacked and published online, had manipulated data. It said his reputation, and that of his unit, remained intact. But the committee criticised UEA authorities for not ensuring that Prof Jones was more open with his data.

The e-mails were hacked from the university's computer network and were published on the Internet just before the Copenhagen climate conference in December 2009.

Professor Edward Acton, UEA's vice chancellor, and Lord Lawson, chair of the Global Warming Policy Foundation, consider the report's outcomes.

I hope that you are happier with this form of words.

Best wishes,

Andy

Follow Up Flag: Follow up
Flag Status: Completed

Hey folks, this sounds like it could be a good idea.

I didn't know anything about it before, so I just wondered the basis of the questioning?

Do we know yet the thrust of the Muir Russell report, and these sessions based on that insight?

Do we actually have a date yet for Muir Russell? Do we know yet if he will let us see it in advance per the original agreement, or is he going to follow the recommendations of the now-defunct Select Committee?

I'd be grateful to be copied into the briefing notes sent to [REDACTED] - I assume he's not the guy who came up to see Edward and Phil before?

Where's he from?

Best,
Neil

Hi Brian

The expenses are in addition to the fee as they are direct costs. There are other costs we would not recharge of course but travel in particular we would expense back for example.

Hope that makes sense!

Best regards

Olga

On 18 Jun 2010, at 15:35, Rymarz Elaine Mrs (REG) wrote:

As from Brian Summers:

 Dear Olga,
I have received an invoice for expenses for Neil Wallis for February 2010, which comes in addition to the 'fixed fee' which we had agreed. I do not recall mention of any charges other than the fee, and neither does the Vice-Chancellor. Was this invoice (much like many of my emails!) sent in error, or have I just missed something in the agreement?

Kind regards,

Brian Summers
