[Casing integrity test after closing 32 29Oct2018 \(002\).pdf](#); [Site Alarms - Extraction from Induction.pdf](#);

Afternoon Dave,

I managed to find the email from Cuadrilla regarding the site alarm system update based on the findings from the 3rd/4th October 2018 inspection. As you will see from point 2. below, following the inspection Cuadrilla decided to install a new alarm system – with extract from induction package attached.

Regards,

[REDACTED]

The current COVID 19 crisis is making receipt of, and access to, post extremely problematic. HSE would be grateful if you could avoid sending hard copy mail wherever possible and instead send electronic versions. Please let us know by phone or email of any instances where this is not possible and hard copy mail needs urgent attention.

Hi [REDACTED] – thanks for calling. In response to your questions:

1. You have been added to the TLS reporting system DistList.
2. Alarms: Following recent visit by HSE, we decided to install a new alarm system. We chose a 2-tier system, where an intermittent alert says something has been spotted. People should be on alert and first-aiders on-site should report to the main office for instruction. People should not muster or cease operations. A continuous alarm indicates an emergency situation and all those at site should muster.

This system is included in our induction for every person working at or visiting our site and alarm buttons around the site are clearly labelled.

I'm attaching an extract from our induction package which is delivered face-to-face for every visitor or person working at site.

As always we are happy to discuss if this can be further improved.

3. I attach a copy of the Casing pressure test conducted yesterday afternoon.

Best wishes. [REDACTED].
