Dear Mr Calder

Thank you for your email.

We have set out below information relating to your request which is publicly available on our website at: <https://connecteddata.westernpower.co.uk/>. For ease, I have attached some examples to this email.

We publish the following registers which are updated on a monthly basis:

- The Embedded Capacity Register – this provides details of all generation of at least 1MW including MPANs which are connected to or have been accepted to connect to our distribution network. The information provided includes generator type, location and capacity.
- the Generation Capacity Register – this provides details of (i) all generators that are connected to the network, (2) all generators that have accepted offers to connect to the network, (iii) all generators that have received offers but which have not yet accepted, and (iv) all generators which have enquired about connecting but which have not yet received an offer to connect. We also publish the larger generator connection map which shows generators with an export capacity of at least 1MVA which are connected to or have been accepted to connect to our network.

We also publish the following:

- shapefiles covered by our Primary substations to determine geographic coverage – These are ESRI shapefiles that digitally describe the geographic coverage of the area of land electrically supplied against a particular EHV substation.

- primary co-ordinates - These are the easting and northing Cartesian coordinates for EHV substations where our equipment is located.
- DFES (Distribution Future Energy Scenarios) reports which outline credible futures for growth of the distribution network for each local authority area on our website (available [here](#)).

Please can you confirm if this information is sufficient to answer your request. If it is not sufficient, please would you let us know what elements of your request are not answered by this information. Please also note, if you require any further information, then we may be entitled to charge a fee to respond based on the costs incurred in collecting and providing the requested information. For more information on our fees, please refer to the section on [Environmental Information Regulations on our website](#).

Kind regards

Mrs T Brewin
