Subject: Proposed sustain talk

Paul,
here it is. Have a look and call me later if you want to chat.
I do present some example of contamination but this is in US, so probably need some comment (in qs? from you?) about why US different.
Talk finishes on slide 47 - some are 10 secs slides and some are you 'animations' but we will need to be succinct. And then some back-up slides if needed for qs?
Some you have on timer - do you still want that?

Fin is coming in this pm, so he will have a look at it too. If you want to make changes, do so and send back. Until 4.30pmish.

I was going to add in your twitter address but cannot find it

Kind regards,
Susan
