Subject: [section 40(2) – FOIA] meeting 15.4.10

Status: Not Started
Percent Complete: 0%

Total Work: 0 hours
Actual Work: 0 hours

Owner: [section 40(2) – FOIA]

Recommend retain corp connection currently going into the library. This shouldf not be hard but can thing of a few issues with only having lgfl line, e.g. retain corp firewall, pix intalled (?), web filtering.

Has consulted barry fleet and ken kaplan.

Arrange a meeting and inlcude [section 40(2) – FOIA].

ICT:

Acorn and Children's Centre need LGFL

Library will need a corporate connection and cannot see that LGFL will provide everything they need (e.g. public network, etc.)

How many inputs there will be. Pipes? Libraries want 100mg connection so it will be future proofed. Corporate 100mg connection. Can't see any reason for them use LGFL.

5 mg LGFL connection to cover CS.

One comms room in the library area. Will it be shared? Incoming lines will at least need to come into the same location.

Who supports CS and Acorn Unit which will probably be the existing support service. We have no problem with a shared comms room.

Can't imagine us needing more than 2 - 48 ports.

[section 40(2) – FOIA] have chat with Hamden way to see if they need a server. They will only have a small number of machines.

Need to spend money on a larger UPS.

Cabling will be done by the building contgractor, flood wired and we will only have to define points.

WiFi - separate out the library requirement from CS, we will have to have two

separet Wifi networks??? [section 40(2) – FOIA] - can integrate them even with the two different connections so services to public and corporate side so staff can use their tablets. Use corporate link/chip to access library servers/lgfl.

We are perfectly open to the idea of sharing and gaining access to LGFL connection but we would need the LGFL connection so we would need to understand implications. Probably best to keep separate because nursery/childerns centre requirements are not very much.

Who do CS use for Wifi - [section 40(2) – FOIA] send [section 40(2) – FOIA] an email with details of supplier used in PSCIP. Not really bound to that procurement route. With that said Elevate may have there own idea about who to use. In terms of funding [section 40(2) – FOIA] asked to what extent and the response was pretty generic and 'all inclusive'.

We will need to link into PCT at some point just to make sure we've touched base.

Concern over Wifi and how that will be installed so perhaps we can request it is devolved down to us but we will need to be careful re: budget.

We need to be very clear in our spec in terms of multiple networks, roaming, etc. and at some point have a round table to make sure there are no conflicts.

Phones - all phone will be done corporately/barry fleet. Again just need to include the detail in our spec.

Comms room spec - fire/raised floor, etc.?? We should present ideal and let them comment.

Panic alarm in disabled toilets.

Libaries need line for credit card machine. Standard BT line - builder will take care of fire and intruder alarm.

Access to comms room - think we can set it up so there is very little access requirements from CS. Libraries will want it to be locked down as much as possible.

We really need to tie up the data points.

[section 40(2) – FOIA] does not think PC will be included. We will have to maange this and squeeze money out of existing CS budgets.

OPEC public access computer. Need to have a chat with libraries and CS about how this will work.

Send floor plan to [section 40(2) – FOIA].

Session or number of session to sit down with building contractor and architects to define but we should provide at least a high level specification (numbers of plugs, etc.)

Appropriate lighting as it relates to position of PC's.

Floor boxes are preferred to dado rails, etc.

Revenue costs - [section 40(2) – FOIA] takes care of the corporate line coming in.

Will re-assess need for 100mg line. They were thinking it was including PCT.
