

Maternity Performance Report

July 2013

Maternity Performance Scorecard

Month 04 - July 2013

1. 12-Week Assessment

Target booking numbers is an internal target to monitor the activity within the Maternity unit.

Booking by 12 weeks & 6 days is a national target, the minimum standard is 90%. In 2012 we worked on an action plan to support achievement of this target. The ASAP campaign was launched in July 2012. Women who are referred early are being booked in time, women are also being booked within 2 weeks of the referral being received.

Indicator MY02b excludes the late referrals, and against this measure the Trust is constantly achieving the minimum standard of 90%. The rate of 88.5% in July is provisional and subject to validation. Indicator MY02c includes those late referrals which reduces the overall performance to below 90%. We continue to work with our health partners to improve the timeliness of the referrals where this has been identified as a continuing problem.

2. Antenatal Screening

These are national targets which rely on data from both internal and external sources. The Trust has achieved all the targets. In respect of indicator MY07, uptake of Down's syndrome, there is a delay in data availability as this test is not done until 16 weeks and the data is received from Birmingham laboratory.

3. Care In Labour

This section has 3 targets, 1:1 care in labour, midwife to birth ratio and the number of deliveries.

1:1 care in labour records the availability of a midwife solely to a woman whilst in established labour (4cms +). The birth to midwife ratio is a national standard of 1:28, however NHS London has a target of 1:30. In July the Trust achieved 100% for 1:1 care. Midwifery Staffing establishment meets the required 1:30 ratio.

4. Type of Birth

There is a strict system of booking elective caesarean sections by a consultant only. In July, the elective rate was 11.2% and the emergency rate was 18% which is an increase on June, with an overall rate of 29.2%. The normal delivery rate is over 60% and the instrumental rate dropped by 4% to 10.2%

5. 3rd & 4th Degree Tears

This is the actual number of 3rd and 4th degree tears sustained by women measured against national recommendations. In June there were five 3rd degree tears, however the Trust has had no 4th degree tears for the year to date.

6. Massive Obstetric Haemorrhage (MOH)

This is in line with the national definition and agreed North West London definition of MOH. There is no target set currently but the current numbers are not at a level that would cause concern. There were four in July.

7. Workforce

This monitors the Royal College of Obstetricians and Gynaecologists recommendations for consultant presence on a labour ward. This is associated with the number of deliveries conducted by the unit, we should have 60 hours a week or 240 hours a month as we deliver over 2,500 births. We have a strict rota to ensure that this level is maintained. This section also monitors the midwifery workforce between establishment and staff in post. The overall vacancy rate should be below 5%.

Consultant cover is at the level expected. The vacancy rate in July was 10%. Due to the fall in booking numbers we will be monitoring the vacancy rate extremely closely and not recruiting into some posts until activity increases.

8. Re-admissions following Delivery

This section identifies the re-admissions for mothers and babies within 28 days of delivery. An audit which entailed reviewing all notes and assessing the pathway of readmissions has been completed. As a result changes are being implemented to pathways. In July the number of maternal readmissions went down and baby readmissions slightly increased. There is a full programme of work to continue to reduce this number.

9. Patient Safety

This section monitors our serious incidents, and number of complaints. We do not have a high level of serious incidents when benchmarked with other maternity units.

There were no SI's or complaints in July.

Maternity Performance Scorecard

Month 04 - July 2013

10. Breastfeeding

This monitors the initiation of breastfeeding at delivery, and exclusive (not giving formula) at discharge from Ealing Hospital. It also monitors breast feeding rates at 10 days discharge from the community midwife. There is a work stream to continue the improvement to the initiation and continuation of exclusive breastfeeding.

Baby Friendly Certificate of Intention has been received and an action plan has been formulated in line with gaining Unicef Breastfeeding accreditation.

In July the initiation rate at delivery was 86.9% and at discharge 91.7% of women were exclusively breastfeeding.

11. Smoking Cessation

This looks at the percentage of women not smoking at time of delivery. The target is 90% and this is consistently met.

12. Newborn Screening

This section monitors the Neonatal screening targets for BCG's, Newborn Blood Spot test, Hearing Tests and Examination of the Newborn.

In July all the targets for BCG and Newborn examination were achieved.
