Thank you for confirming that DIADEM is acceptable. We will be applying the VDM on a production / attraction basis. The rationale, other than it being best practice, is that we need to retain a link between modes used for the outbound and inbound trips.

Regards

Hi xxxxxxxxx,

Sorry for my slow response. I agreed with your proposal to use DIADEM (trip frequency and trip distribution) for SWTP. Could you please clarify whether the VDM is applied on a Production/Attraction or Origin/Destination basis and the rationale behind?

Regards,

xxxxxxx

xxxxxxxxxx,

I will look at the technical note and get back to you next week.

Regards,

xxxxxxxxxx

Dear xxxxxxxxxxxx,

Further to the email below are you in a position to provide a response to this note?

Kind Regards,

xxxxxxxxxx

Please find attached the VDM note which has been revised since our discussion at your office to incorporate a recommendation to use DIADEM. The elasticity tests indicate that variable demand modelling would not necessarily be required, but in discussion with [HCC Official] and [WSP] we felt we should use some form of variable demand modelling tool to be on safer ground.

With regard to the other comments and re-issuing reports, these are substantially complete and I hope to start feeding these through in next week.

Regards

xxxxxxxxxx
