Dear ' [redacted] '

Planning application for IFA2 – National Grid proposal at Daedalus Airfield, Hampshire, PO13 9YA

Thank you for forwarding me the letter dated 1st June 2016 from ' [redacted] ' regarding the above planning application.

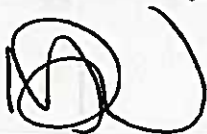

This planning application has generated substantial local public interest. One of the recurring issues raised by local residents is the potential impact upon health as a result of EMFs emitted from cables and the equipment within the main converter buildings.

Within his letter [redacted] notes that the proposed development would be fully compliant with Government Policy on EMFs and fields produced would be below the relevant guidelines. In his conclusion, [redacted] further states that he does not 'consider that the development is likely to lead to significant public health impacts.....'

Whilst I acknowledge that no significant public health impacts are likely to result from the development, some readers of the letter have highlighted that public health impacts per se have not been ruled out. Are you able to provide any further clarity or comment specifically on the potential level of public health impact arising from EMFs?

If you would like me to provide any further information please let me know.

Yours sincerely,

Department of Planning and Regulation
