

## e-Messaging Highlight report – April 12

### 1. Provider e-Messaging capability

Provider	EDT	DTS	Other	
Southampton	Y	Y		Fully implemented
Portsmouth	Y	May'12	NHSmall	Removal of the NHSmall service agreed with SHIP Primary Care IT Board due to poor governance and process management. EDT process enabled and being tested. Once tests are complete and guides created we'll open a requesting process for all DocMan practices. DTS process being enabled with plans agreed for completion by end of May '12.
Basingstoke		Y		In discussion with Hampshire Hospitals over development of EDT process
Winchester		Y	NHSmall	Removal of the NHSmall service agreed with SHIP Primary Care IT Board due to poor governance and process management. In discussion with Hampshire Hospitals over development of EDT process
Care UK		testing		DTS process currently being tested with Southampton practices from server at RSH

### 2. Rollout progress

Practices with DocMan will have a preference to receive the documents through the EDT process, straight into their scanning workflow. This is good for the practice workflow, though removes clinical codes within the document, and presents to the practice as a scanned image (.tif file format). The practice software then uses IntelliSense (DocMan module) to recognise clinical information within the document.

Modules within some of the systems (currently EMIS LV, EMIS Web and TPP) enable receipt of the message through the current DTS message format used for pathology.

Practices without a DTS enabled system or DocMan will not currently be able to received electronic discharge information.

Note - All practices are happy to continue with pathology and radiology results coming through the current DTS route.

The chart below shows the total number of enabled practices, against the total capable of receiving through the preferred format.

<u>CCG</u>	<u>DTS</u>	<u>EDT</u>	<u>Not compliant</u>
