SQL Script for Section Detentions

Report Description

The report provides various statistics for the number of patient detentions under specified Sections (2, 3, and 37), and inpatient discharges under these sections. A detention is counted on the date the section was applied only, and a patient is only counted once in each month/ week for each section.

The period covered is January 1st 2018 to 30th September 2020. In the Overall Figures tab, the totals for the first two years are summarised monthly, while 2020 is summarised weekly (where possible, see below), with the date of the Monday as the first day of the week.

The tab is numbered corresponding to the original questions, with two tables for each question. Smaller figures are replaced by "< 5" to indicate there are less than five patients in that category, for Information Governance compliance. Thus the Section 37s are mostly small numbers, and some of the Section 3 discharges.

The tab Age Bands summarises the patients detained under sections as above by age band and year. Smaller figures have again been replaced by "< 5".

Breaking these down any further, by months for instance, would result in most of the categories being "< 5", and the tables would thus be largely meaningless.

The same applies to ethnicity and gender, which have not been supplied; the figures for male and female were approximately equal over the whole period, however, and "White British" accounted for over 90% of ethnicities.
