170004S-201

There is patient information available.

Yes

No comments

170004S-202

A patient feedback exercise has been undertaken.

Yes

No comments

Overall Comments

The Black Country Vascular Network provides high quality care, in major arterial index procedures offering excellent clinical outcomes as reflected within the NVR.

We are compliant with the national vascular society provision of services document and also GIRFT compliant.

Risk Comments

Non availability of dedicated hybrid theatre and junior doctor staffing has been highlighted which is currently being reviewed and we are working on plans to mitigate these risks. Sustainability of 24/7 interventional radiology across the network is also highlighted as a risk and under active discussions.
