

Hi,

Can I ask that you please share with you teams specifically where we HALO capacity, we need some eyes on the ground to be assured as below. Any problems please give me a call.

SSG UK SAS vehicles

Action. request that HALO's as appropriate undertake spot checks looking at consumables including maternity packs & if patient identifiable data is stored in the front cab. [REDCATED] can you please undertake this element, we will need time, date, registration and location of vehicle checked along with call sign and who undertook the review. Please also check if PARAMEDIC crew that they have end tidal CO2 monitoring (LIFPAK 15). I will request this action.

To check defibs - SSG use two models of defibrillator LIF-PAK 12 and 15 with the 12 not having end tidal CO2 monitoring capacity. I was informed that when they send Paramedics out on our contract they only have the 15. We need to be assured this is happening (HALO checks).

Regards
