MAX RINGBS OF ARV WPNS IF METRES

| Serial | AFY | *pn | H8 | Anti-tk | WG | Notes |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| (8) | (b) | (द) | (त) | (0) | (1) | (g) |
| 1. | Centurion 105-m | 105-ma | 7,200 | 1,800 | - | With ranging WG |
|  |  | . $30-1 n$ coaxial ug. | - | - | 1,600 | Normally limited to 800 when the tracer burns out. |
|  |  | . $30-1 \mathrm{n}$ comd's MG | - | - | 800 |  |
| 2. | Chieftain | 120-mm | 7,500 | $\begin{gathered} 3,000 \\ \text { (see note) } \end{gathered}$ | - | Assume; optimum battlefield range for anti-tk 1,800 m . This is max range of ranging $M G$; above this range a hit will kill but accuracy deteriorates. |
|  |  | 7.62-man coaxial UG | - | - - | 1,600 | ) Normally limited to 1,000 when the tracer |
|  |  | 7.62-ma cond's mg | - | - | 1,600 |  |
|  |  | . 50 ranging MG | - | - | 1,800 | Strictly for ranging the main armament only. amo sup and barrel wear prohibit other uses. |
| 3. | Saladin | 76-mm | 6,400 | 1,600 | - |  |
|  |  | . 30 - in cogxial. MG | - | - | 800 |  |
| 4. | Saracen | . $30-\mathrm{in}$ MG | - | - | 800 |  |
| 5. | Berret Mk I | . $30-$ in MG | - | - | 460 | Reduced range of . 30 MG is due to lack of proper mounting. |
| 8. | Ferret uk II | . $30-\mathrm{in}$ WG | - | - | 800 | ```Proportion fitted with Vigilant (anti-tk cw with range of 1,375 m).``` |
| 7. | Hornet | Malkara | - | $\begin{array}{r} 450 \text { (min) } \\ 4,000 \text { (max) } \end{array}$ | - |  |
| 8. | EV_432 | Swingfire | - | $\begin{aligned} & \text { Classified } \\ & \text { see note } \end{aligned}$ | - | For Staff College purposes assume same as Maikara, is 450 (min) and 4,000 (max). |

| Sarial | Bqpt | $\begin{gathered} 7 \operatorname{mox} \\ \operatorname{mang} \theta \\ \text { (metres) } \end{gathered}$ | Ampo |  |  | Retes OT Fhre（rpm） |  |  |  |  | Remerks |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Type |  | 1st Ling | Intens－ | Rapld | Norma 1 | Slow | Very Slux |  |
| （E） | （b） | （c） | （d） | （e） | （1） | （g） | 76） | （1） | （i） | （1） | IIT |
| 1. | $\begin{aligned} & 105-\mathrm{mm} \\ & \text { pack } \end{aligned}$ | 10，000 | －HE <br> Smoke <br> HRSH <br> Tgt Indicating <br> Tliuminating <br> Canister | 33 | $\begin{array}{r} 150 \\ 16 \\ 12 \\ 16 \\ 16 \\ 4 \end{array}$ | 5 | 4 | 3 | 2 | 1 | Gun can be broken down into 12 loads－heaviest $2 \frac{1}{2}$ c形。 <br> Ammo sceles not applicable to cdo 1t regt． |
| 2. | $\frac{105-\mathrm{mm}}{(\text { Abbot })} \mathrm{SP}$ | 17，500 | ＊HE <br> Smoke ERSH Tgt Indi cating Illuminating | 35 | $\begin{array}{r} 168 \\ 20 \\ 18 \\ 12 \\ 12 \end{array}$ | 6 | 5 | 3 | 2 | 1 | Ammo carriad on gun： <br> Swimming preparations take 1,3 mins．Speed in water 2.4 ktis ． $\begin{aligned} & \mathrm{HE} \\ & \mathrm{HBSH} \end{aligned}$ |
| 3. | 5．5－in | 16，500 | ＊HE | 80 | 134 | 2 | 13 | 1 | 3 | $\frac{1}{3}$ |  |
| 4. | $\underset{(M 109)}{155-\mathrm{mm}} \mathrm{SP}$ | 14，600 | HE | 95 | 134 | 3 | 2 | 2 | $\frac{2}{3}$ | $\frac{1}{4}$ | Rates of fire provisional． |
| 5. | 8－in how | 16，500 | ＊ H B | 200 | 56 | 1震 | 1 | $\frac{1}{2}$ | 5 | 1／6 |  |
| 6. | $\frac{175-\min }{(4107)} 5$ | 32，800 | HR | 147 | 142 | 1 | － | $\frac{1}{2}$ | － | － | Rate of fire provisional． |

for planning purposes it is normal to take $90 \%$ of the max ramge．
＊Incl airourst．
FRONTAGES AND SAFB DISTANCES

| Eqpt | Hax Eff Frontage of One HE Shell | Reas onab 18 Sape Distan | co for He from Nesiest Trs |
| :---: | :---: | :---: | :---: |
| （a） | －（b） | － | － |
|  | 40 50 55 65 60 | 250 400 400 700 600 | 500 500 500 800 700 |

Above figures $c$ an be halved for tps in ARCs．
NUCLEAR ARTY

| Seriel | Nature | Bqpt | Herhoad Yield | Pypes of Burst | Hap |  | Rate of Fire by Bty |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| (a) | (b) | (c) | (d) | (8) | (1) | (g) | (h) |
| 1. | Gun | 8-in how | 1 and 2 KT | High and low air'bursts | 2 | 20 | 12 per hr (pax) |
| 2. | PFR | Honest John | $5,20 \text { and } 50 \mathrm{KT}$ | High and low air surface burste | 7 | 40 | 8 per day |

These figures are for trg only and arg based on the data for a Medium Range Cannon end a Large Free Rocket given in Artillery
Training Volume VIII Pamphlet 2 (Nuclear Artillery, Tables of Effects).

| Serial | Nature | Eqpt | Hax EPr | A19mo |  |  | Remarks |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| (a) | (b) | (c) | (d) | $\frac{\text { weight }}{(6)}$ | (1) |  | (h) |
| 1. | LLAD | $\begin{aligned} & 40-\mathrm{mm} \text { L70 (towed) with } \\ & \text { FCE AA NO } 7 \end{aligned}$ | 7,000 ft | 2 | HB | 603 | Can fire at the rate of 240 rpm . Blindfire capability. |
| 2. | LILD | ET 316 | Adequate overlap with Thunderbird 2 | 88 | HE | 13 | Performance details classified. In practice tarrain will always limit performance. For planning purposes, assume each weapon covers $120^{\circ}(2130 \mathrm{mils})$ out to $4,000 \mathrm{~m}$. |
| 3. | Hy AD | Thunderbird 2 | 60,000 ft * | $\text { (total } \mathrm{FS} 1 \text { weight) }$ | HE | 4 | Propellant. Solid fuel. Guidance. Semi-active using target illuminating radar. <br> - Trg figure only. |

RADAR USED BY AD ARTY

| Serial | Type of Set | How Carried | Used By | Used For | $\begin{gathered} \text { Displayed } \\ \text { Range } \end{gathered}$ | Remarks |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| (8) | (b) | (c) | (d) | (8) | (f) | (E) |
| 1. | Redar AA No 4 Mk $7 / 1$ and Radar AA No 4 3k 7/3 | Self-contained tir towed by a 10 -ton tractor. | Llad | Local wne | $\begin{array}{r} 35 \mathrm{~km} \\ 70 \mathrm{~km} \\ 105 \mathrm{~km} \\ \hline \end{array}$ | Normally used on a displayed range of 35 km .納 3 is fitted with 3qII. |
| 2. | Radar AA No 7 Mk 4 | Mtd on same chassis as $40 / 70$ gun and towed by lo-ton tractor. | LLAD | Tgt acquisition and tracking | 16 km | Commonly known as FCE7. Used with 40/70 gun. |
| 3. | Radar AD No 10 Mk 1 | Self-contained tlr towed <br> by $10-$ ton truck. Aerial <br> removed and carried on <br> towing veh during transit. | Thunderbird 2 | Tgt illumination | Classified | Can also travel with aerials in semi-retracted position. |
| 4. | Radar $A D$ No 11 Mk 1 | Two self-contained tlrs towed by 10 -ton tractors. | Thunderbird 2 | Tac con | Classified | Both radars used together with a bty CP ( $2 \times 5$-tion |
| 5. | Radar AD No 12 Mk 1 | Self-contained tlr towed by 10 -ton tractior. | Thunderbird 2 | Height finding | Classiried | tirs) for tac con. |

LOC BOPTS

| cozial | Type of Bqpt | E\%M Carrled | Used By | Used For | Capability | Rem8rks |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| (3) | (b) | (c) | (d) | (8) | (S) | (2) |
| \% | 5 rg eqpt | FY 432 or truck 3-t on, and truck s-ton | $S \mathrm{rg}$ tps of I oc regt <br> Loc bity of strat res. | Loc guns. Sacondary roies: <br> B. LOC of mortars. <br> b. Adjustmant of fire. | Fix within 100 m up to $1 \frac{1}{2} \mathrm{x}$ base length or within 200 m up to $2 \frac{1}{2} x$ base length. <br> Usual base length 10,000 $12,000 \mathrm{~m}$. <br> Computar can store info on 60 tgts. <br> Accuracy affected by high winds. <br> Swamped by intense activity. | Ona pars rg tp. <br> Approx 3 hrs to deploy. <br> Response time - 3 mins. |
| 2. | USD 501 Irone | Truck 3-ton | Sury bty of lac regt. <br> Loc oty in atrat res. | Confiniming tgts. Tgt acquisition. Gen gurvaillance. Post strike anslysis. | Total range -90 km . <br> Flt paths pre-planned with up to 3 turns. <br> Cransas oan be op tigice per gortis. <br> Total area photograpiod per sortie: $\begin{aligned} & \text { Day } 1 \mathrm{t}-1.5 \mathrm{~km} \times 45 \mathrm{~km} \\ & \mathrm{Ki} \quad-1.5 \mathrm{~km} \times 5 \mathrm{ki} \end{aligned}$ <br> Tp capablo of 3 mans par 2 hra . Responsa tima - approx 50 itins from receipt of msn to delivary of negatives. | Performance classifisd. Data in colm (i) for trg purposes only. Sixtean drones per tp. <br> However the sustained rato of a tp wald ba spprox 20 msns per day. |
| 3. | Radar No 8 Kk 1 (Green Archer) | $\begin{aligned} & 1-\operatorname{ton} a r y \text { or } \\ & \text { Seracon } \end{aligned}$ | Loc tps of ed refts. <br> Loc Dty atrat res. <br> LOC tp FARELP. | Loc mortars. Adjugtmant of arty and mortar fire. | Fix well within 100 m under optimum siting conditions. yax range 10,000 mior $81-$ min morkars. Longer for med and hy mortars. <br> Scans $40^{\circ}$ ( 710 mils) arc. Hy rain can halve range. | Two per aect. Horks 1ndependently. <br> Time into action - 6 <br> ming given survey. <br> Locating time - approx 15 gecs. <br> S1l mit genergter. |

Notes:

1. Colm (d) refers to the max height above mean ses level of the strip or Le from which the ac cen op.
2. Colm (i) utilisation rate allows for ac unserviceability. Thus, for planning purposes, a recce fit with three Skeeters should be able to get 90 flying hrs out of its Skeeters in one month.
3. The Alouette and Scout both have a gas turbine engine.
PERFORYANCR DEAAILS OP CURREAT STRATRGIC TRANSPORT SST) AQ

Ferry Range, 3,500 nm. <br> 2. Fit refuelling receiver capability. |

1. The range payload figures will have to be adjusted for local effects of temperature, height of airfield and humidity. In addition, the wat (Weight and Temperature Limitation) factor, will on occasions limit the payload to enable the ac to take off in accordance with the regulations for flt to full safety standards.
2. The difference between the max range shown in colm (c) and the ferry range quoted under the last colm are caused by ac structural limitations, ie the extra fuel to achieve max ferry range prevents a payload being carried. 3. The comet 2 is due to be withdrawn from sve in 1967.
PERFORMANCE DETAILS OF CURREAT TACTICAL TRANSPORT (TAC T) AC (TEMPERATE CLIMATES)

## Notes:

1. The range payload figures must be adjusted for local effects of tamperature, height of airfield and humidity. In addition the WAT (Weight and Temperature Limitation) factor, will on occasions, limit the payload to enable the ac to take off in accordance with the regs for flt to full safety standards.
2. The Argosy fuselage is constricted.
3. The Argosy has on in flt refuelling capability.
4. The argosy can be fitted with long range tks.
5. In colm (g) the unbracketed para figure for Beverley and argosy ac is the max number which can be carried. The bracketed figure is the nomal op load for tac drop.
6. $\mathrm{C}-130 \mathrm{~K}$ (Hercules) is due in sve in 1867.

The fol are some or the terms frequently usad in connection with comas. Those marked * are the agreed NATO terms. The more tech ones have been omitted.

| Term or Abbreviation | Meaning |
| :---: | :---: |
| ACT | Apparatus Carr Telephone (see Carr Rqpt). |
| ADPS | Automatic Data Processing Systems, a complete system based on the use of electronic computers for the solution of problems and the storage of info of a mil nature: The term also incls the means of comm between computers and betwen the input device and the computer when they are separated. |
| AM | Amplitude Modulation (see Modukation). |
| * Audio Preq | A freg which can be detected as a sound by the human ear. the range of audio freqs extends from 20 to 20,000 cycles per second. |
| Bandwidth | All those freqs lying betwoen two particular pts in the freq spectrum. It is usually expressed by the difference between these freqs. |
| Carr Bqpt | Eqpt which can provide more than one spesch channel over a comm system. |
| CPS | Carr Preq Shift. A method of tg usurliy found on radio systems, whers a sig is transmitted by slightiy displacing the fundemental freq on which the eqpt is working. |
| Channel | A band of freqs which can be used to provide either speach or tg comms between two places. |
| Channeliing Eqpt | See Carr Eqpt. The two are synonymous. |
| *Cipher, Off-inine | A method of eneryption which is not associated with a particular transmission system and in which the resulting cryptogram can be transmittod by any means. |
| *Cipher, on-line | An automatic mothod of encryption associated with a particular transmission system, whereby sigs are encrypted and passed dir to op the reciprocel sqpt at the distant sta. |
| - Circuit | An electronic path between two or more pts capable of providing a number of channels. |
| circuit, 2-wire | A coma system where the sigs priginated at each end use the same path, eg a normal telephone pt to pt link over a cable pair. |
| Circuit, 4-wire | A comm system where the send and receive dirs of signalling are kept physically or electricalily separate. |
| Crystal con | The use of the mech and electrical properties of a crystal (quartz or other similar minerals) to con the operating fraq of a radio system. This method is noted for its accuracy and stability. |
| *Cycle | One complets positive and one complete negative alternetion of a current or voltage. |
| - Duplex | The provision of corm between two pts in both dirs simultaneously. |
| Bxchange CB | Central Bty Exchange. An exchange with CB Pacilities is one where the user lifts his telephone to call an op. The op sees a lamp it up for the extension concerned. The power to op this lamp is provided from a bty system loc at the exchange. |
| * Pacsimile | A systeri of telecomm for the transmission of fixed images with a view to their reception in a permanent form. |
| *FDM | Freq Div uultipiex. A multiplex system in which two or more sigs are transmitted simultaneousiy over a common path, each sig occupying a dífferent freq band. |
| Preq | The number of cycles occurring in a fixed pertod of time, usually one second. |
| Fm | Freq wodulation (see Modulation). |

| Torm or Abbreviation | Meaning |
| :---: | :---: |
| Generator | Apparatus for producing AC electricity. |
| HF | High Freq. Radio ireqs between 3 and $30 \mathrm{Mc} / \mathrm{s}$. |
| $\mathrm{Kc} / \mathrm{s}$ | Kllocycles per second. Thousands of cycles per secon |
| $\mathrm{mc} / \mathrm{s}$ | Megacycles per second. Millions of cycles per second. |
| Modulation | Varying a fixed sig with the particular sig to be transmitted. This can be done in a number of whys eg AM varies the amplitude of the fixed sig in dir sympathy with the characteristics of the sig to be transmitted. <br> FM varies the instantaneous freq of the fixed sig in dir sympathy with the characteristics of the sig to be transmitted, etc. |
| * Uultiplex | the gimultangous use of a number of chaniols on a single clrcult. |
| PM | Pulse Modulation (see Modulation). |
| Printed Circuit | A production method whereby int emal wiring of eqpt is dispensed with and replaced by an insulating material on which lines of metal are otched in such a manner that an electric current can flow to and from components wid on the material. |
| RR | Radio Relay. A means of provid ing by using radio techniques, circuits comparable with trae circuits. |
| Hepeater | A device to amplify a sie. |
| SHF | Super High Freq. 3,000 to $30,000 \mathrm{Nc} / \mathrm{s}$. |
| *Sidioband | The freq band above or below the carr, produced by the process of modulation. |
| Simplex | The provision of comms in one dir only at any one time. |
| *Swbd Magneto | A manual telephone exchange at which the subscribers and ops call and clear by means of magneto generators. |
| *Tape Relay | A method of receiving and retransmitting megs in tape form. |
| *TDM | Time Div muitipiex. A multiplex system in which the total aval circuit time is divided between the number of channels to be transmitted. |
| *Telecomm | Telecommunication. Any transmission, emission or reception of sigs, signs, writing, images and sounds or int of any nature by wire, radio', vis or other electromagnetic systems. |
| *Tg | A system of telecomm for the transmission of int by the use of a sig code. |
| *Telophony | A system of telecoma set up for the transmission of speach or, in some cases, other sounds. |
| Transistor | A device using semi-conductor materials which displays many of the advantages of the thermionic valve but reguires less powar and is smaller. At the present it surfers from limitations of freq and power handing capacity. |
| UHP | Ultra-High Freq. 300 to 3,000 $\mathrm{Nc} / \mathrm{s}$. |
| Watt | A unit of power. A powerful electric it bulb uses 100 watts. A single bar electric fire uses about 1,000 watts. |
| Wavelength | The distance, usually measured in metres, between any two adjacent identical pts on a waverom. |
| VF | Voice Preq, ie audio freq tones. |
| VHF | Very High Freq. 30 to $300 \mathrm{mc} / \mathrm{s}$. |
| Yagi Antenns. | A particular type of directional antenna to handle VHF sigs. |

[^0]FREO OVBRLAP OF VHF RADIO SEIS

Notes:

TBE BPHONE

| Sertal | Type | Detail |
| :---: | :---: | :---: |
| 1. | P | The normal mil desk telephone. |
| 2. | $L$ | The lineman's telephone. |
| 3. | J | Standard Id telephone. Tropioslised improved version of telaphone $L$. |
| 4. | H | Sound powered, no btys. |
| 5. | Future Development <br> Telophone Hand Sound Powered No 1 | Sound powered, no btys. Under consideration for gen adoption within the inf bn. Range much greater than telephone H . |
| 6. | Gen Purpose Telephone Handset | To replace all existing types except telephone F. |

SWBDS

| Sarial | Level Used | Prasent Ropt |  | Future Rapt |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Smbd | Telephone | Automatie Swbd |
| 1. | $\mathrm{Ha} / \mathrm{regt}$ | 10 11ne | J, F |  |
| 2. | Bde | 40 line $F$ and $F$ and 10 Inne magnato | J, F | 40/160 |
| 3. | Div | 80 ling | J, F | 40/160 line $\times 2$ |
| 4. | Corps | 120 1ing | J, P | 40/160 line $\times 3$ |
| 5. | Army gp | 120 line | F | a. Trunk GB20 $\times 4$ <br> b. Satellite $40 / 160 \times 3$ |

PD CABLES
(TIMES OR CONST ARE FOR GOOD CONDITIONS, IN OPEN COUNTRY, IN DAYLIGHT)

| Serial | Type of Cable | Speech Range in Niles (mioaded) | Det for Laying | Speed of Const | Renariss |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1. | Cable, electric, D! 0 ( $26 \mathrm{lbs} / \frac{1}{4}$ mile cofl) | 10 | a. 1 or 2 men on foot. <br> b. 8 linemen, $2 \times \frac{1}{6}$-ton and tirs, $1 \times$ i-ton trick. | 2 mph 4 mph | found in dispenser colls like a bell of string. This allows fast laying and laying by ac or hel. |
| 2. | Cable, electric, fd quad | 20 | 10-20 linemen <br> $1 \times 4$-ton and tl r <br> $2 \times 1$-ton trucks <br> $1 \times 3$-ton truck <br> (This det is for poled route and can be reduced when cable is laid on the ground) | Poled <br> $3 / 4 \mathrm{mph}$ Ground 2 mph | Used for RR tails and heavier types of routes in rear of div. Obsolescent. |
| 3. | Cable, electric, cacr quad, Type P lk III ( 140 lbs/a mile drum) | 29 | Similar to Serial 2 |  | Primarily for use with multi-channel systems. Lengths ara joined by couplers supplied with each cable coll. Loading pots to give increased range can be inserted between couplers. |
| 4. | ```guture Developments Cable, eloctric, lt we1ght, quad (55 lbs/t mile coll)``` | 19 | Similar to Serial 2 |  | Replaces cable at Serial 2 in its gen purposes employment and as RR te.ils. Lighter than Serial 2. |
| 5. | cable, alectric, 10 pair (plastic) <br> ( $150 \mathrm{lbs} / \mathrm{k}$ mile drum) | 24 | Similar to Serial 2 |  | Cable for ra use, primarily for local distr and inter-connection of echs of a gQ: |

[^0]:    With HF sets, greater ranges

    Only sets in the same freq band and using the same method of modulation can inter-op.
    Range depends on type of antenna used. Figures given are those for vertical rod of average height.
    be obtained by using horizontal wire antennae.
    ふ $\mathfrak{m}$
