Introductory note

This introductory note does not form a part of the notice

The following notice gives notice of the variation of an environmental permit.

This variation makes the following changes to the permit;

1. Increase the annual throughput to 97,000 tonnes; this will consist of 25,000 tonnes of green waste for composting and 72,000 tonnes of wood waste. The wood waste is intended to provide fuel for the renewable energy generation facility to be built on adjoining land.
2. The treatments available for wood waste in Table 2.1 have been increased. A storage limit for wood waste of 5000 tonnes has been added to activities Table 2.1.
3. Add a single waste code, EWC 19 05 03 (off spec compost), to waste list Table 2.2.
4. Extend the site boundary to include drainage infrastructure including lagoons that are required to take run-off from the wood waste storage area. This area of land was omitted from a previous variation. The new site plan is shown in Schedule 4.
5. The paragraph in Table 2.1 which states that storage, treatment, composting must take place in any form of enclosed reactor vessel is not applicable to this site and has never been enforced, as the site activity is open windrow composting so this removed from the permit.

The schedules specify the changes made to the original permit.

The status log of a permit sets out the permitting history, including any changes to the permit reference number.
